X

FUNCTIONAL REQUIREMENTS · NOT A TECHNICAL DESIGN DOCUMENT

KitchenX PRD v0.4

A screen-by-screen, journey-mapped functional specification for KitchenX's B2B ordering, warehousing and fulfilment platform — prepared to brief an external design & development partner. This revision incorporates the 15 Sept 2026 and 19 Sept 2026 planning MoMs.

DOCUMENT	VERSION	DATE	PREVIOUS VERSION	LAUNCH MARKET
Functional PRD	**v0.4 · Draft for Vendor Review**	**19 Sep 2026**	**v.03 · 03 Sep 2026**	**Hyderabad, Telangana**

NEXT MARKETS	BENCHMARK
Bengaluru (P2) · Multi-city (P3)	**Hyperpure (Zomato)**

What changed in v0.4 (at a glance): Two new consulting/service lines (KitchenX Starter Kit and Procurement Audit — Section 25); Inventory Management formalised as a fifth reusable platform module, now covering offline/store-based selling (Section 26); merchant category tagging, personalised navigation, recommended categories and frequently-bought-together recommendations (Section 27); referral programme promoted from "out of scope" to a fully functional Phase 1 feature (₹1000 voucher); Pay-later credit-line and KitchenX Wallet moved from Phase 1 to Phase 2 — Phase 1 payments are now Prepaid (UPI/card) and Cash on Delivery only; Kitchen Appliances/Equipment and Equipment Servicing moved from Phase 1 to Phase 3; GST invoicing reconfirmed at 5% with a mandatory physical printed copy accompanying every delivery; intelligent, multi-partner delivery routing reconfirmed and detailed for Phase 1. Every change below is tagged inline — look for the NEW, PHASE 2 and PHASE 3 badges.

DOCUMENT MAP

Requirements by Functional Area

Counts requirements (FR-…) and business rules (SYS-…) actually enumerated with an ID in this document, across every section including the Phase 2 and Phase 3 specifications (Sections 29–30).

How this document is organised

SECTIONS 00–05

Foundations

Executive summary, goals, scope, market benchmark, personas, navigation.

SECTIONS 06–13

Process Flows

Step-by-step journeys from onboarding through admin governance, Phase 1 only.

SECTIONS 14–18

Screens & Requirements

The full screen-by-screen mock set for every interface, Phase 1 only.

SECTIONS 25–27 NEW

New in v0.4

Starter Kit & Procurement Audit, Inventory Management Engine, Personalization.

SECTIONS 19–24

Governance

Business rules, roles, notifications, rollout plan, assumptions, MoM traceability.

SECTIONS 29–31

Future Phases & Glossary

Full Phase 2 and Phase 3 specifications kept at complete detail, then the glossary.

00 Executive Summary

KitchenX is a new B2B supply platform for the food & beverage trade — restaurants, bakeries, ice-cream parlours, cloud kitchens, sweet shops, food processing units, catering units, packaged/processed food units, convention centers, function halls, “Chai Buddy”-style tea/snack stall chains, and similar businesses — that order staples and kitchen essentials (fresh produce, dairy, proteins, pantry goods, packaging and more) in bulk. KitchenX operates its own warehouse(s), holds inventory, and fulfils orders either through its own delivery fleet running scheduled routes, or, for smaller orders, through third-party logistics partners.

The closest reference model is Hyperpure, Zomato's B2B wholesale arm. This document borrows Hyperpure's proven structure — catalogue-led discovery, multi-outlet accounts, real-time order tracking — while defining KitchenX's own operating model: a single Hyderabad warehouse at launch, rack-level warehouse control, QR-based stock intake, and a rules-driven decision between KitchenX's own fleet and third-party couriers for every order.

This is a **functional** requirements document. It describes *what* the system must do, screen by screen and step by step, and *how a user experiences it* — not how it should be engineered.

Beyond the core buy-side marketplace, KitchenX's platform is built around five internally-reusable, configurable modules — Promotions, Offers, Product Listing, Services Listing, and, new in this revision, **Inventory Management** NEW (Section 26) — each with its own admin configuration surface rather than being hardcoded into a single feature.

New in v0.4: Following the 15 Sept and 19 Sept 2026 planning meetings, KitchenX now also brokers two consulting/advisory products — the **KitchenX Starter Kit** (a full consulting business for new restaurant/bakery entrants, including cuisine/burger/biryani/pizza kits and a KitchenX cost audit) and a standalone **Procurement Audit** service for existing F&B businesses — both detailed in the new Section 25. The Inventory Management capability that has always underpinned Goods Receipt (Section 09) is now formally scoped as a fifth reusable platform module, extended to also power offline/in-store selling (Section 26). Phase 1 payments are re-scoped to Prepaid + Cash on Delivery only, with credit-line and KitchenX Wallet deferred to Phase 2 (Section 12). Kitchen Appliances/Equipment and equipment servicing move from Phase 1 to Phase 3.

01 ◎ Goals & Success Measures

What KitchenX needs the platform to achieve in its first phase of operation.

BUSINESS GOAL

Replace informal buying

Give restaurant/shop owners a reliable, app-first alternative to phone-order and mandi (wholesale market) buying, with transparent pricing and stock visibility.

BUSINESS GOAL

Zero stock-mismatch

Warehouse physical stock and app-displayed stock must agree at all times — a non-negotiable rule (Section 19), now also enforced for offline/in-store sales (Section 26).

BUSINESS GOAL

Right-mode delivery

Every order is automatically routed to the cheapest reliable fulfilment mode across the majority of B2B delivery partners integrated in Phase 1 (Section 08).

BUSINESS GOAL

New: Advisory revenue line NEW

Starter Kit consulting and Procurement Audit engagements convert marketing-site interest into a tracked, RM-owned sales pipeline (Section 25).

MEASURE OF SUCCESS

Onboarding time

Time from document submission to account activation.

MEASURE OF SUCCESS

Inventory accuracy

% of SKUs where app-shown quantity matches physical count at any audit point (target 100%), inclusive of offline/in-store sales.

MEASURE OF SUCCESS

Order-to-delivery adherence

% of orders delivered within the ETA shown at checkout.

MEASURE OF SUCCESS

Referral-driven signups NEW

% of new merchant accounts originating from the Phase 1 referral programme (Section 25/27).

02 Scope

What Phase 1 (Hyderabad, single warehouse) includes, and what is explicitly deferred. Updated per the 15 & 19 Sept 2026 MoMs — changes marked inline.

IN SCOPE — PHASE 1

- Customer web app + mobile app (Android & iOS) — catalogue, ordering, tracking, multi-outlet accounts
- Warehouse mobile app for goods receipt (QR + manual), rack assignment, picking, packing, dispatch
- Platform Admin panel — onboarding approval, catalogue & pricing, order & exception monitoring, delivery-partner management
- Finance Admin panel — invoicing, refunds (credit limits/settlement move to Phase 2, see below)
- Technical Admin panel — users/roles, system configuration, integration health, master data
- Payments: **Prepaid (UPI/debit/credit card via Razorpay & Cashfree) and Cash on Delivery (COD) only** NEW. Pay-later/credit-line and KitchenX Wallet are deferred to Phase 2 — per the 15 Sept 2026 MoM, no credit or wallet feature ships in Phase 1.
- GST-compliant tax invoice auto-generated for every order at **5% GST**, with a **mandatory physical printed copy sent along with the goods delivery** NEW, in addition to the digital copy (GSTIN captured at onboarding; see Section 07 & 19)
- Delivery ETA engine — own fleet vs. third-party courier decisioning, integrating the **majority of B2B delivery partners** with intelligent, parcel-size/weight/distance-aware partner selection NEW (Section 08)
- Returns, damage & complaint handling
- Notifications via push, SMS, email and WhatsApp — all four channels confirmed for Phase 1
- Broad catalogue: produce, dairy, proteins, pantry staples, bakery inputs, packaging & cleaning supplies. **Kitchen equipment/appliances is removed from this Phase 1 catalogue** PHASE 3 — see below.
- Reports & analytics dashboards for the customer app and for every admin console
- **Inventory Management Engine** NEW — formalised as a fifth reusable platform module (QR + powerful manual search inward entry, benchmarked against Walmart/Amazon-style inventory practice); now also the backbone for offline/in-store selling (Section 26)
- **Offline / store-based (walk-in) selling** NEW, always transacted through the web or mobile application so inventory stays in sync (Section 26)
- **Reusable Promotions & Offers** across the full product suite (goods, packaging, services, Starter Kit/Procurement Audit) — reconfirmed, not new
- **Fully functional referral programme** NEW — a merchant who refers another merchant earns a ₹1,000 voucher once the referred merchant's first order is confirmed (Section 25/27), promoted from "out of scope" in v.03
- **Suggested Basket** (auto-generated basket forecast) — reconfirmed Phase 1
- **Request for Bulk Quote** — reconfirmed Phase 1
- **Near-expiry stock alerts** — reconfirmed Phase 1
- **Vendor Master** (inward supply-side vendor registry) — reconfirmed Phase 1
- **Inward bill tracking**, reconciled against Goods Receipt — reconfirmed Phase 1
- **Merchant category tagging** at onboarding, driving a personalised menu/left-navigation and recommended categories at login NEW (Section 27)
- **Frequently-bought-together / market-basket recommendations** at the point items are added to cart NEW (Section 27)
- **KitchenX Starter Kit & Procurement Audit** consulting/advisory products NEW, lead capture on the marketing site and RM-owned pipeline (Section 25)

OUT OF SCOPE — PHASE 1 (CANDIDATES FOR LATER PHASES)

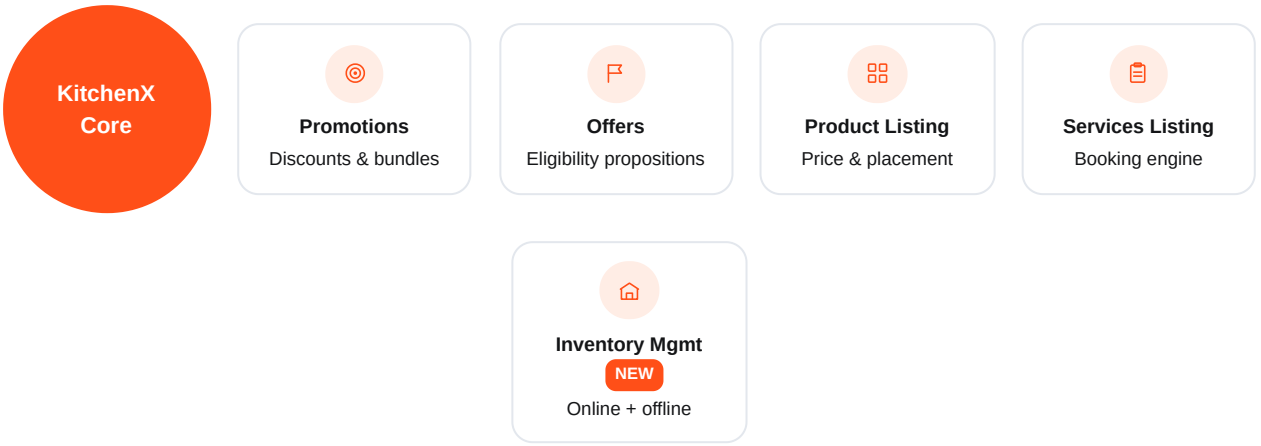

- Multi-city / multi-warehouse routing logic (Bengaluru expansion is Phase 2 — Section 22)
- Menu/recipe-based ordering suggestions or demand forecasting beyond Suggested Basket
- **Pay-later credit-line and KitchenX Wallet** PHASE 2 — moved out of Phase 1 per the 15 Sept 2026 MoM; full specification kept at Section 28

- **Behaviour-based buying personalisation** (segmenting discount-seeking vs. non-discount-seeking customers and customising the menu accordingly) PHASE 2 (Section 27)
- **Kitchen Appliances/Equipment** product line, and **Equipment Servicing** PHASE 3 — both moved out of Phase 1 per the 19 Sept 2026 MoM; full specification kept at Section 29
- Loyalty points and subscription plans (referral is now Phase 1, see above — loyalty points/subscriptions remain deferred)
- Marketplace model (3rd-party sellers listing on KitchenX)
- In-house route-optimisation algorithms (Phase 1 uses simple route/slot assignment plus multi-partner courier selection — Section 08)
- Vendor/procurement-side portal for KitchenX's own suppliers (flagged in Section 23)
- A full multi-seller marketplace storefront — Phase 1 adds only the underlying Product Listing and Services Listing engines, operated by Platform Admin on KitchenX's own catalogue and a curated set of onboarded providers

Resolved conflict (this revision): v.03 listed pay-later/credit-line and KitchenX Wallet as Phase 1 payment methods, and listed Kitchen Appliances/Equipment as in-scope for Phase 1. The 15 & 19 Sept 2026 MoMs explicitly move both out of Phase 1 — credit/wallet to Phase 2, equipment (product line and servicing) to Phase 3. Every downstream section (Checkout, Account, Finance Admin, Roles Matrix, Notification Matrix, Phased Rollout, Navigation) has been updated accordingly.

Platform Modules — Reusable, Configurable Capabilities

Five internal engines, each with its own admin configuration surface, designed to be reused across KitchenX's product lines rather than built as one-off features. Inventory Management is new to this list in v0.4 — see Section 26.

PROMOTIONS ENGINE

Merchandising discounts — percentage/flat-off, bundle deals, category-wide and time-boxed flash promotions.

OFFERS SUITE

Eligibility-driven propositions — first-order, loyalty/referral, bundled service+product, RM-assigned account offers. The referral offer type is now a fully specified Phase 1 feature (Section 25).

PRODUCT LISTING ENGINE

Price/markup rules, placement, active-window duration, and an approval workflow before any listing goes live.

SERVICES LISTING ENGINE

Booking services rather than goods from onboarded, verified third-party providers. Equipment servicing moves to Phase 3 within this engine; Deep Cleaning remains Phase 1.

INVENTORY MANAGEMENT ENGINE NEW

QR-scan or powerful-search manual inward entry, rack/bin tracking, near-expiry and price-variance alerts, Vendor Master — and now the shared backbone for both online and offline/in-store outward movement (Section 26).

03 Market Benchmark

How KitchenX's model compares with Hyperpure and other B2B F&B supply players.

CAPABILITY	HYPERPURE	JUMBOTAIL/NINJACART	KITCHENX (THIS DOCUMENT)
Buyer type	Restaurants, cloud kitchens, hotels	Kirana stores, restaurants	Restaurants, bakeries, ice-cream parlours, F&B shops, cloud kitchens, hotels, sweet shops, processing units, catering, convention centers, function halls, Chai Buddy chains
Ownership model	Own warehouses + farm sourcing	Own + partner warehouses	Own warehouse(s); starts with one in Hyderabad
Delivery	Own fleet, wholesale + express slots	Own fleet, next-day	Own fleet for route orders; majority of B2B courier partners integrated for off-route orders, with intelligent size/weight/distance-based partner selection NEW
Multi-outlet accounts	Yes, single login for chains	Limited	Yes — required from Phase 1
Payment (Phase 1)	Wallet, credits, pay-later	Cash + digital, credit lines	**Prepaid (Razorpay/Cashfree) and Cash on Delivery**; credit-line & wallet deferred to Phase 2 PHASE 2
Onboarding	Business KYC, doc verification	Store KYC	Document capture & screening, activation/deactivation workflow, merchant category tagging NEW
Inventory visibility	Real-time, prevents overselling	Real-time	Real-time, hard 100% match rule — now formalised as a reusable Inventory Management Engine also covering offline sales NEW
Returns	In-app, historic pain point	Limited	In-app complaint flow with photo evidence & defined resolution paths
Advisory / consulting services	Not offered	Not offered	KitchenX Starter Kit (new-business consulting) and Procurement Audit NEW — a market gap neither benchmark competitor addresses

KitchenX intentionally adopts Hyperpure's strongest patterns — category-led home screen, cart grouped by delivery slot, one-tap reorder, multi-outlet login — while addressing Hyperpure's own published pain point (slow, opaque returns). Beyond fast-moving F&B groceries, KitchenX carries customisable Packaging with AI/AR preview. Kitchen Appliances/Equipment remains a planned adjacent line but now lands in Phase 3 rather than Phase 1, per the 19 Sept 2026 MoM.

New in v0.4: The Starter Kit and Procurement Audit consulting lines (Section 25) target a segment neither Hyperpure nor Jumbotail/Ninjacart serve directly today — aspiring restaurant/bakery/sweet-shop entrepreneurs who need turnkey setup guidance, and existing operators who want their current procurement process audited and optimised. Both are offered as services layered on top of the same catalogue and ticketing infrastructure, not a separate product.

04 Personas

Seven roles interact with KitchenX. Every screen in this document is written against one or more of these personas.

CUSTOMER-FACING · 1 ROLE

End Customer

Restaurant owner · shopkeeper · bakery · ice-cream parlour · sweet shop · caterer · food processing/packaged-food unit · convention center/function hall · Chai Buddy outlet

- Orders staples in bulk for daily/weekly restocking
- Wants price transparency, stock certainty, and predictable delivery timing
- May manage one outlet or a chain of several outlets under one account
- In Phase 1, pays prepaid or cash on delivery; running credit is a Phase 2 capability PHASE 2
- Tagged to a business category at onboarding, driving a personalised catalogue view NEW (Section 27)

Mobile App · Web App

CUSTOMER RELATIONSHIP · 1 ROLE

Relationship Manager (RM)

Single point of contact per customer

- Owns a portfolio of assigned customers, from onboarding through every subsequent order
- Tracks order status and on-time delivery, fields calls/messages directly
- Escalates to Platform Admin automatically if unresolved within 12 business hours
- New: owns the Starter Kit / Procurement Audit sales pipeline for assigned leads NEW (Section 25)

Admin Web Console (filtered)

WAREHOUSE OPERATIONS · 2 ROLES

Warehouse Supervisor

Ground-floor warehouse staff

- Receives incoming stock, scans QR/barcode, records quantities via the Inventory Management Engine
- Falls back to manual entry (with powerful SKU search) when scanning fails NEW
- Picks, packs and stages outgoing orders; can also key an offline/walk-in sale from the warehouse app NEW (Section 26)

Warehouse Mobile App

Warehouse Manager

Oversees warehouse operations

- Approves stock reconciliation & high-value manual entries
- Owns rack/bin layout and stock ageing/expiry monitoring, near-expiry alerts
- Assigns orders to KitchenX vehicles/routes or hands off to courier partners; now selects among the majority of integrated B2B courier partners NEW

Warehouse Mobile App · Warehouse Web Console

PLATFORM GOVERNANCE — ADMIN CONSOLES · 3 ROLES

Platform Admin

Runs day-to-day business operations

- Reviews and approves/rejects customer onboarding documents; assigns merchant category tags

- Manages catalogue, pricing, and delivery-partner relationships
- Monitors orders, exceptions and customer complaints
- New: reviews Starter Kit / Procurement Audit leads and assigns RMs NEW

Admin Web Console

Finance Admin

Owns money movement

- Reconciles Razorpay/Cashfree settlements for prepaid orders, and cash reconciliation for COD orders NEW
- Approves refunds and credit notes raised from complaints
- From Phase 2: sets and reviews customer credit limits & payment cycles PHASE 2

Admin Web Console

Technical Admin

Configures the platform (functionally)

- Manages user accounts and role-based access for all internal personas
- Configures delivery zones, SLA thresholds and notification templates
- Watches integration health across the full roster of integrated B2B courier partners NEW

Admin Web Console

05 Navigation & Information Architecture

Top-level navigation for each interface this document covers. Updated for merchant personalisation and the Phase 3 removal of Kitchen Appliances.

Home → Search & Catalogue → Cart → Orders (Active + History) → Reports (My Spend) → Offers → Services → Account (Outlets, Profile)

Fig 5.1 — Customer App/Web top-level nav. Kitchen Appliances is removed as a top-level destination in Phase 1 PHASE 3 *— it returns in Phase 3.*

Dashboard → Goods Receipt → Pick Lists → Pack & Dispatch → Offline Sale (NEW) → Stock Count / Reconciliation → Reports

Fig 5.2 — Warehouse App nav, with a new Offline Sale destination for walk-in/store-based selling (Section 26) NEW

Dashboard → Onboarding Queue → Catalogue & Pricing → Order Monitoring → Delivery Partners → Starter Kit/Procurement Leads (NEW) → Reports

Fig 5.3 — Platform Admin nav, with a new lead queue for the Starter Kit and Procurement Audit consulting products NEW

Relationship Manager does not get a sixth interface: RM works from a filtered view within the Platform Admin Console, scoped to assigned customer accounts plus assigned Starter Kit/Procurement Audit leads. FR-RM-001

"Search & Catalogue" on the Customer App/Web splits into Groceries & Staples and Packaging in Phase 1. Kitchen Appliances is deferred to Phase 3 and is not a Phase 1 nav destination PHASE 3 (previously a Phase 1 destination in v.03).

New in v0.4: At login/home, the app now surfaces a Recommended Categories rail personalised to the merchant's tagged business category, and the left-hand catalogue menu re-orders itself toward categories the merchant has been browsing/ordering NEW (Section 27, FR-CUST-100/101). This is additive to, and never replaces, the primary bottom tab bar / top nav, matching the existing pattern set for the product-page category submenu (FR-CUST-090).

Two further top-level destinations remain from v.03: **Offers**, listing every offer the customer is or could become eligible for — now including a concrete, fully functional Referral offer (Section 25/27) — and **Services**, for browsing and requesting third-party commercial-kitchen services. Equipment Servicing is removed from the Services category list in Phase 1 '+TAG_P3+' and returns in Phase 3 alongside the Kitchen Appliances product line.

06 Journey: Onboarding & KYC

From a prospective restaurant/shop owner discovering KitchenX to being able to place their first order.

Mobile + OTP → **Name, address & category** → **Assign merchant category tag (NEW)** → **Submit for verification** → **Admin reviews** → **Approved → Account active; RM assigned**

Fig 6.1 — Only mobile, name, address and category gate basic onboarding; document upload is optional and never blocks activation. Credit-line application is a separate, later, Phase 2 request PHASE 2 *(Section 12).*

ID	REQUIREMENT	PERSONA
FR-CUST-001	System captures mobile number and verifies via OTP before any other onboarding step.	End Customer
FR-CUST-002	Business type is a required single-select: Restaurant, Bakery, Ice-cream Parlour, Shop/Kirana, Cloud Kitchen, Sweet Shop, Food Processing Unit, Catering Unit, Packaged/Processed Food Unit, Convention Center, Function Hall, Chai Buddy Outlet, Other (free text).	End Customer
FR-CUST-098	**New.** The business type selected at FR-CUST-002 is stored as the merchant's primary category tag and drives the personalised catalogue/menu described in Section 27; the customer can change their primary category later from Account settings, and can always search/browse outside their tagged category.	End Customer
FR-CUST-003	Document upload (GST certificate, FSSAI licence, PAN card, business registration proof, cancelled cheque/bank proof) is optional at onboarding and never blocks account activation.	End Customer
FR-PAD-001	Platform Admin sees a review queue with document previews and a per-document Approve/Reject action plus a mandatory reason field on rejection.	Platform Admin
FR-CUST-004	Customer receives activation or rejection notice via push, SMS and email within the same session as the Admin decision.	End Customer
FR-CUST-005	An activated account can add unlimited additional outlets, each with its own delivery address, contact person, and delivery-slot preference.	End Customer
FR-PAD-002	Platform Admin can deactivate any activated account or outlet, with deactivation reason logged and visible to Finance Admin.	Platform Admin
FR-CUST-006	Customer can update mobile number and email from Account settings at any time.	End Customer
FR-PAD-026	Onboarding approval requires only mobile, name, address and business category to be present and valid; uploaded documents are reviewed but their absence cannot be a rejection reason on their own.	Platform Admin
FR-RM-002	The moment Platform Admin approves an onboarding application, the system assigns a Relationship Manager to the customer; Platform Admin can reassign the RM at any later time.	Platform Admin / RM
FR-CUST-099	**New.** If the customer signed up via a referral link/code, the referring merchant and referred merchant are linked at this step so the ₹1,000 referral voucher (Section 25) can be triggered once the referred merchant's first order is confirmed.	End Customer

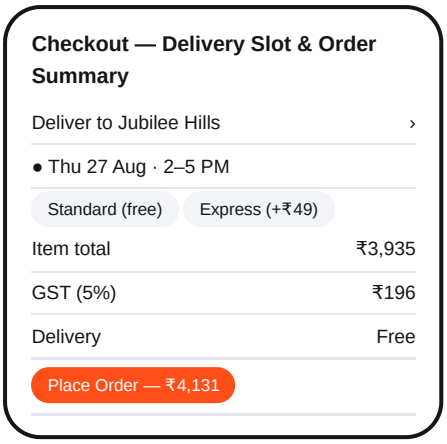

PHASE 2 Apply for Credit Line moves from a Phase 1, any-time-post-activation flow to a Phase 2 capability. In Phase 1 there is no in-app credit application — see Section 12.

07 Journey: Catalogue, Cart & Checkout

From browsing the catalogue to a confirmed, paid order. Payment methods re-scoped to Phase 1: Prepaid + COD only.

Browse personalised catalogue *(NEW) → **Add to cart** → **Frequently-bought-together suggestion (NEW)** →
Cart: review ETA & outlet → **Choose Prepaid or COD *(re-scoped)** → **Order confirmed** →
GST invoice (5%) generated + printed copy queued for dispatch *(NEW)

Fig 7.1 — Pay-later/Wallet removed from the Phase 1 payment step; Cash on Delivery is added. Every confirmed order still generates a GST invoice regardless of payment mode, and Phase 1 additionally queues a physical printed copy for the warehouse to include at dispatch.

WHAT'S ON SCREEN, AND WHY

1. Standard/Express is the same delivery-speed tier chosen on Home/Cart, restated here with the Express fee stated up front. FR-CUST-071
2. The price breakdown (item total, 5% GST, delivery fee) is shown in full before the customer commits — the payment-method tiles themselves sit on the following Checkout & Payment screen (Section 14). FR-CUST-014
3. "Place Order" is the single, unambiguous final action — no extra confirmation dialog to click through. FR-CUST-111

ID	REQUIREMENT	PERSONA
FR-CUST-010	Home screen shows category rails, active deals, a "Reorder" rail, and — new in v0.4 — a Recommended Categories rail personalised to the merchant's tagged category (Section 27).	End Customer
FR-CUST-011	Product listing and detail pages display live stock status sourced from the warehouse inventory in real time; out-of-stock items cannot be added to cart.	End Customer
FR-CUST-012	Cart groups items by category and shows a running subtotal, applicable discounts, and estimated delivery window before checkout.	End Customer
FR-CUST-013	Multi-outlet accounts must select which outlet an order is for before checkout.	End Customer
FR-CUST-014	**Revised.** Payment step offers UPI, debit card and credit card via Razorpay and Cashfree, plus **Cash on Delivery** NEW. Pay-later and KitchenX Wallet are not offered in Phase 1 PHASE 2 — they return in Phase 2 (Section 12).	End Customer
FR-CUST-102	**New.** Where Cash on Delivery is selected, the checkout screen shows the exact amount due on delivery and a reminder that the delivery agent carries no change beyond a configurable float; the order still generates the GST invoice and reserves inventory exactly as a prepaid order does.	End Customer
FR-CUST-065	A GST-compliant tax invoice — seller & buyer GSTIN, HSN/SAC codes, and **5% GST** CGST/SGST/IGST breakup — is auto-generated the instant an order is confirmed, independent of payment mode.	End Customer
FR-WH-057	**New.** A printed copy of the GST invoice is automatically queued to the pack station's printer the moment an order is confirmed, and packing cannot be marked complete until that printed copy is physically included with the shipment (Section 10) — in addition to, not instead of, the digital copy.	Warehouse Supervisor
FR-SYS-001	Inventory is provisionally reserved the moment an order is confirmed (not merely at dispatch), so two customers cannot both check out the last unit of a SKU. This reservation logic is shared with offline/in-store sales via the Inventory Management Engine (Section 26).	System-wide rule
FR-SYS-007	No order can move to "Packed" until its GST invoice has been generated successfully **and** queued for printing.	System-wide rule

FR-CUST-070	On the 1st of every calendar month, an AI-generated outreach message asks every active customer for their expected monthly order volume by category.	End Customer
FR-CUST-080	A "Repeat Last Order" action is available in one tap and adds every item from the customer's most recent order to the cart at current prices/stock.	End Customer
FR-CUST-103	**New.** The moment an item is added to cart, a "Frequently Bought Together" rail appears beneath the cart line items, suggesting items other customers commonly order alongside it (a market-basket recommendation), each addable in one tap without leaving the cart (Section 27).	End Customer
FR-CUST-111	"Place Order" is the single, unambiguous final action at Checkout — there is no additional confirmation dialog to click through once it is pressed.	End Customer

Referral Programme — Now Fully Functional in Phase 1 NEW

ID	REQUIREMENT	PERSONA
FR-CUST-104	A unique referral code/link is generated for every activated merchant account, shareable via WhatsApp/SMS/email from the Offers screen and Account settings.	End Customer
FR-CUST-105	When a new merchant signs up using a referral code/link, both accounts are linked at onboarding (FR-CUST-099); the referring merchant sees the referral's status (Invited → Signed Up → First Order Placed → Bonus Credited) on the Offers screen.	End Customer
FR-SYS-013	A ₹1,000 voucher is automatically credited to the referring merchant's Offers wallet the moment the referred merchant's first order is confirmed (not merely signed up), and a notification is sent to both parties.	System-wide rule

Packaging customisation (AI/AR preview), the Promotions/Offers customer-facing surfacing, Services Marketplace booking, "Talk to X" AI support, and Bulk Ordering via Excel all carry over unchanged from v.03. Kitchen Equipment Fulfilment and its Location-Aware ETA addendum move to Phase 3 PHASE 3 — see Section 22.

07 Journey: Catalogue, Cart & Checkout (continued)

Packaging customisation, Promotions/Offers surfacing, Services Marketplace, AI Support, Bulk Ordering and Suggested Basket — all reconfirmed Phase 1, restored here at full detail from v.03.

Packaging Customisation & AI/AR Preview

Packaging SKUs (e.g. burger boxes, printed bags) can be branded to the customer's own outlet before ordering. Unchanged from v.03.

ID	REQUIREMENT	PERSONA
FR-CUST-074	On an eligible Packaging product, a "Customize" flow captures the customer's brand name, brand colour, logo (image upload), and a tagline, carried through to the order as line-item customisation data.	End Customer
FR-CUST-075	Once customisation is saved, the system generates an AI photorealistic 360° preview of the product with the customer's branding applied, viewable by dragging/rotating in-app before the item is added to cart.	End Customer
FR-CUST-076	An "View in AR" option uses the phone camera to place a to-scale rendering of the customised product in the customer's own outlet.	End Customer
FR-CUST-096	An "Improve My Packaging" flow lets the customer upload their current KLD (dieline artwork), logo, tagline, theme and colour palette, using the same upload pattern as logo upload above.	End Customer
FR-SYS-012	On submission of FR-CUST-096's uploaded assets, an AI model generates 2–3 improved/redesigned packaging concepts, each viewable through the same AI 360° Preview and AR Outlet Preview already used for standard customisation.	System-wide rule

Promotions & Offers — Customer-Facing Surfacing

ID	REQUIREMENT	PERSONA
FR-CUST-093	An active Promotions Engine campaign surfaces to the customer through three placements as configured — a Home banner, a badge on eligible products, and automatic discount application at cart/checkout once eligibility conditions are met, with no promo-code entry required.	End Customer
FR-CUST-094	A dedicated "Offers" section lists every Offers Suite offer the customer already qualifies for and any they could unlock, each showing type, value and validity; an offer redeems either automatically or via a promo code entered at checkout, depending on configuration. This now includes the fully specified Referral offer (Section 25).	End Customer

Services Marketplace — Booking Third-Party Services

A parallel capability to goods ordering. Equipment Servicing is removed from Phase 1 PHASE 3 — Deep Cleaning and similar commercial-kitchen services remain Phase 1.

ID	REQUIREMENT	PERSONA
FR-CUST-095	From the "Services" nav destination, a customer browses service categories (e.g. Deep Cleaning — Freezer/Cold Storage), views verified provider cards with price/quote indication, and submits a "Request Service" booking; the request is tracked with the same Open → In Progress → Resolved status used for other tickets.	End Customer

AI Support — "Talk to X"

ID	REQUIREMENT	PERSONA
FR-CUST-078	A persistent chat launcher, branded "Talk to X", is reachable from anywhere in the customer app/web and resolves the large majority (targeted at roughly 90%) of routine queries without the customer needing to navigate menus.	End Customer
FR-CUST-079	When "Talk to X" cannot resolve a query, it automatically opens a ticket in the platform's single ticketing system carrying the full conversation as context.	End Customer

Bulk Ordering via Excel

For large hotels and multi-outlet/chain accounts, an entire order can be built from a spreadsheet instead of manual cart-building.

ID	REQUIREMENT	PERSONA
FR-CUST-081	A "Bulk Order via Excel" flow is available to eligible account types (large hotels, multi-outlet/chain accounts) from the web app.	End Customer
FR-CUST-082	A downloadable macro-enabled Excel template (.xlsm), pre-built with SKU codes, units and a quantity column per outlet, is provided in-app/web for this purpose.	End Customer
FR-CUST-083	On upload, the completed template is validated against the live catalogue; rows with an unrecognised SKU or an invalid quantity are flagged back row-by-row for correction before the bulk order can be added to cart.	End Customer

Suggested Basket (Auto-Generated Basket Forecast)

Distinct from the one-tap "Repeat Last Order": this is a forecast, not a repeat. Reconfirmed Phase 1 per the 15 Sept 2026 MoM.

ID	REQUIREMENT	PERSONA
FR-CUST-091	The Home screen and Account/Profile section show an auto-generated "Suggested Basket" card, built from the customer's own purchase history and recurring ordering patterns; the customer can add, remove, or edit the quantity of any line item directly before choosing "Review & Order."	End Customer
FR-SYS-011	The Suggested Basket is recalculated on a weekly cadence per customer, using trailing order history to detect recurring items and their typical ordering interval; items with no discernible recurring pattern are omitted rather than guessed.	System-wide rule

PHASE 3 **Kitchen Equipment Fulfilment** (Kitchen Appliances product line, location-aware ETA, AI 360°/AR preview for equipment) is removed from the active Phase 1 spec here and deferred in full to Phase 3, per the 19 Sept 2026 MoM. The complete specification for this feature, unchanged from v.03, is kept at full detail in Section 29 rather than deleted.

08 Journey: Delivery ETA Engine

How KitchenX decides, at cart stage, whether an order travels on its own fleet or via a courier partner — now with intelligent multi-partner selection detailed per the 19 Sept 2026 MoM.

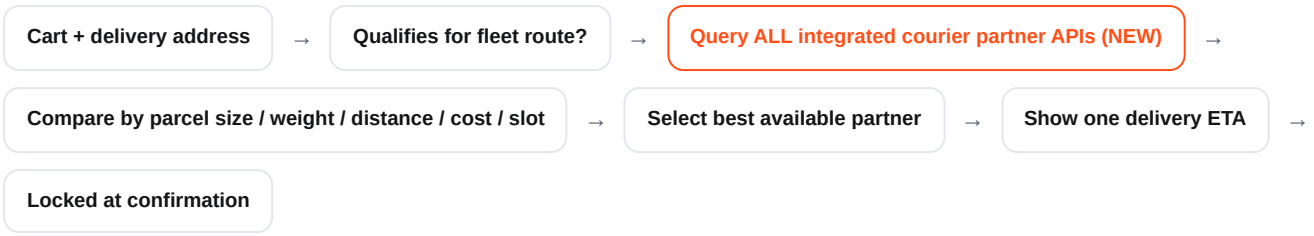

Fig 8.1 — The decision happens automatically and invisibly across the full integrated partner roster; the customer only ever sees one clear delivery promise.

Cart — Delivery ETA Shown Inline

- Arrives Thu, 27 Aug · 2:00–5:00 PM

Tomato · 10 kg	₹420
Ghee · 15 kg	₹3,150

Proceed to Checkout — ₹4,130

WHAT'S ON SCREEN, AND WHY

1. Delivery window is shown as a date + time range, not a vague "2–3 days" — sourced from the assigned route's schedule or the fastest courier quote. FR-CUST-020
2. Fulfilment mode ("via KitchenX fleet" vs. "via courier partner") is a backend dispatch decision only and is never shown to the customer — only the delivery window itself is displayed. FR-CUST-021
3. If no route or courier can meet a reasonable window, the cart shows a warning banner instead of a false promise. FR-CUST-022
4. ETA recalculates if items or quantities change, before checkout is reached. FR-CUST-023

ID	REQUIREMENT	PERSONA
FR-CUST-020	Cart shows the delivery window as a concrete date + time range (e.g. "Thu 27 Aug, 2:00–5:00 PM"), sourced from the assigned route's schedule or the fastest courier quote — never a vague estimate.	End Customer
FR-CUST-022	If no fleet route or courier partner can meet a reasonable delivery window for the cart's destination and contents, the cart shows a warning banner rather than a false promise.	End Customer
FR-CUST-023	The displayed ETA recalculates automatically whenever items or quantities in the cart change, before the customer reaches checkout.	End Customer
FR-SYS-002	A configurable minimum order quantity/value threshold determines whether an order is "route-worthy" for the KitchenX fleet; below it, the courier-partner path is used automatically.	System-wide rule
FR-SYS-003	**Expanded.** KitchenX integrates with the majority of B2B delivery partners operating in the launch market (not a single default partner). For every courier-mode order, the system queries all integrated partners' APIs in parallel with the order's parcel size, weight and delivery distance, compares the returned quotes and available slots, and selects the best partner using a configurable rule (fastest, cheapest, or a blended score) set by Technical Admin — functioning as an independent, self-contained decisioning module that can absorb further partner integrations without changing the customer-facing flow.	Technical Admin
FR-CUST-024	Order Tracking screen shows a live status trail (Confirmed → Packed → Out for Delivery → Delivered), without ever exposing which fulfilment mode is behind it.	End Customer
FR-CUST-097	Once "Out for Delivery," the Order Tracking screen shows a live map panel with the delivery agent's live position and a continuously updating ETA countdown.	End Customer
FR-WH-030	Warehouse Manager can view, for any pending order, which mode/partner the ETA engine chose and manually override it.	Warehouse Manager
FR-CUST-071	At Cart/Checkout the customer chooses a delivery speed tier — Standard or Express (configurable additional fee).	End Customer

Kitchen Appliances' Location-Aware ETA addendum (present in v.03) is removed here and moves to Phase 3 alongside the Kitchen Appliances product line itself PHASE 3 (Section 22).

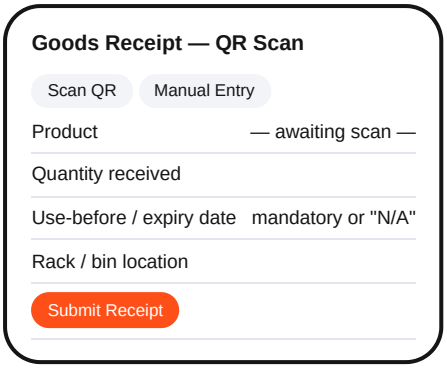

09 Journey: Goods Receipt & Inventory Sync

How new stock enters the warehouse, and how the app's stock count stays exactly in step with the shelf. This flow is now formally the online-selling half of the reusable Inventory Management Engine (Section 26).

Delivery arrives → **Scan QR (fallback: *powerful manual search NEW)** → **Enter qty, batch, expiry, rack/bin** →

High value? → Manager approval → **Submit receipt entry** → **Stock updated & live on shelf**

Fig 9.1 — Physical placement only happens after the system entry is submitted (Rule SYS-01).

WHAT'S ON SCREEN, AND WHY

1. Two entry tabs, Scan and Manual, are always both visible — manual is never hidden behind an error state. FR-WH-001
2. Submit is disabled until quantity and rack/bin are both filled. FR-WH-002
3. A successful scan auto-fills product name, unit and expected unit of measure, reducing manual typing to just the quantity. FR-WH-003
4. Large receipts route to the Warehouse Manager's approval queue automatically, without blocking the supervisor from continuing other receipts. FR-WH-004
5. Use-before/expiry date is mandatory for every batch/SKU — perishables require an actual date; non-perishable items (e.g. packaging) must be consciously marked "N/A" rather than left blank. FR-WH-046

ID	REQUIREMENT	PERSONA
FR-WH-001	Two entry tabs, Scan and Manual, are always both visible — manual is never hidden behind an error state.	Warehouse Supervisor
FR-WH-002	Submit is disabled until quantity and rack/bin are both filled.	Warehouse Supervisor
FR-WH-003	A successful QR scan auto-fills product name, unit and expected unit of measure, reducing manual typing to just the quantity.	Warehouse Supervisor
FR-WH-004	Large receipts (above a configurable value/quantity threshold) route to the Warehouse Manager's approval queue automatically, without blocking the supervisor from continuing other receipts.	Warehouse Supervisor
FR-WH-046	Use-before/expiry date is a mandatory field for every batch/SKU received — perishables require an actual date; long-shelf-life or non-perishable items must be consciously marked "N/A" rather than left blank. Submit is blocked until the field is set either way.	Warehouse Supervisor
FR-WH-058	**New.** The Manual entry tab includes a powerful product search — type-ahead across SKU code, product name, category and vendor, returning results in under a second against the full catalogue — so manual fallback is never slower or less precise than a QR scan (per the 15 Sept 2026 MoM benchmark against Walmart/Amazon-style inventory search).	Warehouse Supervisor
FR-WH-005	At KitchenX go-live, the warehouse's current physical inventory is loaded into the system as a one-time bulk stock entry, screen-verified line-by-line by the Warehouse Manager.	Warehouse Manager
FR-WH-006	Every rack/bin has a unique location code; Goods Receipt requires a rack/bin selection before submission is allowed.	Warehouse Supervisor
FR-SYS-004	No product may be marked as "on shelf" / available-for-sale until its Goods Receipt entry has been submitted and accepted.	System-wide rule
FR-WH-047	A daily scheduled job scans all batch use-before/expiry dates against a configurable near-expiry window and raises a near-expiry alert for every batch that falls inside it.	System-wide rule
FR-WH-048	At goods receipt, and whenever a quotation, proforma invoice or bill is received from a vendor, the system scans the document's unit price against the reference price and raises a price-variance alert if the difference exceeds a configurable threshold.	Warehouse Manager
FR-WH-049	Every inward bill from a vendor/supplier is logged; a Goods Receipt cannot be marked fully reconciled while it has an unlinked bill.	Warehouse Manager

FR-WH-050	A Vendor Master list tracks every inward vendor — name, contact, GSTIN, category, and active/inactive status; every Goods Receipt and inward bill must reference a Vendor Master entry.	Warehouse Manager

Suggested Basket, Bulk Quote, near-expiry alerts and Vendor Master were all already Phase 1 in v.03 and are reconfirmed as Phase 1 per the 15 Sept 2026 MoM — no change to scope, only to the underlying module framing (Section 26).

10 Journey: Pick, Pack & Dispatch

From a confirmed order to a delivered one, and the matching inventory deduction. Now includes the mandatory printed GST invoice.

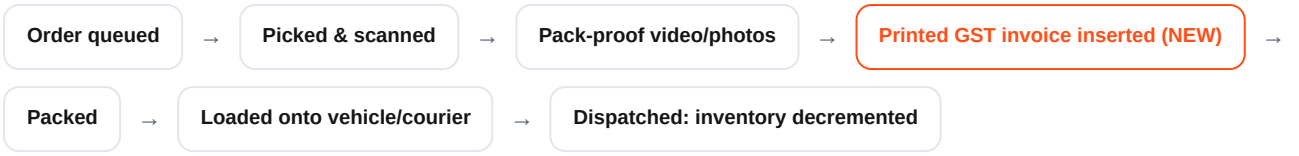

Fig 10.1 — A short pick never silently ships a partial order; it always surfaces to Platform Admin first. Packing now also cannot complete without the printed invoice on file.

ID	REQUIREMENT	PERSONA
FR-WH-010	Pick lists are auto-sorted by rack/bin location to minimise walking distance, and grouped by order.	Warehouse Supervisor
FR-WH-011	Each picked item is scanned to confirm the correct SKU and quantity before it can be marked picked.	Warehouse Supervisor
FR-WH-012	A short pick creates an exception visible to Platform Admin with options: partial ship, substitute item, or delay order.	Warehouse Supervisor / Platform Admin
FR-SYS-005	Inventory is permanently decremented only at dispatch confirmation, matching the moment the item physically leaves the warehouse.	System-wide rule
FR-WH-051	A fixed HD camera records a 15–20 second video sweeping every item in the order immediately before packing.	Warehouse Supervisor
FR-WH-052	At least two photos of the sealed/packed order are captured and attached to the order record before "Confirm Packed" is allowed.	Warehouse Supervisor
FR-WH-057	A printed copy of the GST invoice (FR-WH-057, Section 07) must be physically inserted into the package before "Confirm Packed" can complete; the system blocks completion until this step is acknowledged.	Warehouse Supervisor
FR-WH-055	A Delivery Challan is auto-generated for every order at the point of dispatch/delivery, independent of and in addition to the GST invoice.	Warehouse Manager

10 Journey: Pick, Pack & Dispatch (continued)

Restored from v.03: route assignment, dispatch and customer-visible tracking requirements.

ID	REQUIREMENT	PERSONA
FR-WH-013	Route Assignment screen shows all pending fleet-mode orders for the day, lets the Warehouse Manager group them into a route by delivery zone, and sequence stops.	Warehouse Manager
FR-WH-014	Loading a vehicle requires scanning each order onto that vehicle before dispatch can be marked complete.	Warehouse Supervisor
FR-WH-056	The pack-proof video is produced by a fixed, stationed camera at the pack station; on completion the file is auto-named with the order number and written to the warehouse’s local in-house computer/NAS, then automatically uploaded/sent to the customer.	Warehouse Supervisor
FR-CUST-030	Customer’s Order Tracking screen updates to "Out for Delivery" the moment dispatch is confirmed, showing driver/vehicle identifier for fleet orders or courier tracking link for partner orders.	End Customer
FR-CUST-072	The pre-pack video and post-pack photos are pushed to the customer and remain viewable in-app against that order indefinitely, reducing returns disputes.	End Customer

11 Journey: Returns, Refunds & Complaints

What can still be disputed after delivery, and what the customer’s own at-delivery acceptance already closes off. Unchanged in substance from v.03; refund settlement now runs against COD cash reconciliation as well as digital payments.

ID	REQUIREMENT	PERSONA
FR-CUST-040	Complaint can be raised per line item within a configurable window after delivery, with issue type: Missing item, Damaged, Wrong item, Quality issue, Other.	End Customer
FR-CUST-041	Photo upload is mandatory for Damaged and Quality issue types.	End Customer
FR-PAD-010	Platform Admin sees all open complaints in a queue with SLA-ageing indicator, and chooses Replacement, Refund, or Credit Note.	Platform Admin
FR-FIN-010	**Revised.** Refunds route to Finance Admin for processing against the original payment instrument (Razorpay/Cashfree) or, for a COD order, as a cash adjustment/credit note logged against the customer account (Pay-later credit-line adjustment is a Phase 2 path {TAG_P2}).	Finance Admin
FR-CUST-073	At the point of delivery, the customer must give consent against each individual line item confirming it matches what was shown/ordered.	End Customer
FR-WH-055	A Delivery Challan is auto-generated for every order at the point of dispatch/delivery, independent of and in addition to the GST invoice.	Warehouse Manager
FR-CUST-077	Every customer-reported issue auto-generates one ticket in a single shared ticketing system.	End Customer
FR-CUST-092	From the Profile/Account section, a "Request Bulk Quote" action opens a form; submitting it auto-generates a Bulk Quote ticket — reconfirmed Phase 1.	End Customer
FR-RM-004	A Bulk Quote ticket is routed and alerted to both the customer’s assigned Relationship Manager and the Warehouse Manager simultaneously.	Relationship Manager / Platform Admin

11 Journey: Returns, Refunds & Complaints (continued)

Restored: complaint status visibility and the shared ticketing audit trail.

ID	REQUIREMENT	PERSONA
FR-CUST-042	Customer sees complaint status (Submitted → Under Review → Resolved) and the resolution outcome in-app.	End Customer
FR-SYS-010	Every action taken on a ticket by any internal persona is logged with who acted and when, forming a complete, non-editable audit trail per ticket.	System-wide rule
FR-PAD-028	A Reports view shows ticket volume by category/persona/SLA-breach status and resolution-time analytics, drawing on the same audit trail.	Platform Admin

One Ticketing System, Three Entry Points

Complaints, RM escalations (Rule SYS-10), "Talk to X" chatbot handoffs, Bulk Quote enquiries (Section 07/11), and — new in v0.4 — Starter Kit/Procurement Audit leads (Section 25) all funnel into the same backend ticket. There is one ticketing system, not several.

12 Journey: Credit & Settlement PHASE 2

Per the 15 Sept 2026 MoM, no credit or wallet feature ships in Phase 1 — Phase 1 uses Prepaid and Cash on Delivery only (Section 07). This section outlines the mechanism; the full Phase 2 specification (customer screens, all requirements) is kept at Section 28.

Scope change from v.03: This section was fully in-scope for Phase 1 in v.03 (pay-later credit-line, KitchenX Wallet, Finance Admin credit-limit setting). It is retained here as a complete specification so the development partner can plan for it, but none of it is built in Phase 1. Phase 1 Finance Admin scope is limited to invoicing, COD cash reconciliation, and refunds/credit notes (Section 11).

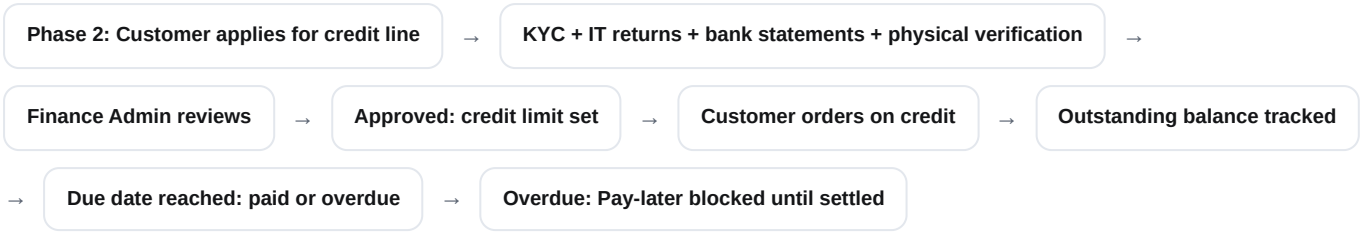

Fig 12.1 — Retained from v.03 unchanged in mechanism, deferred wholesale to Phase 2.

ID	REQUIREMENT	PERSONA
FR-FIN-035	A credit-line application requires KYC documents, bank statements, IT returns, and physical verification of the customer’s facility — all four mandatory — before Finance Admin can approve it.	Finance Admin
FR-FIN-036	Every payment is marked "confirmed" in the Finance Admin ledger only once a direct bank-API call to KitchenX’s partner bank confirms the corresponding fund credit.	Finance Admin
FR-FIN-020	Finance Admin sets a per-customer credit limit and repayment cycle, visible to the customer as "Available Credit" on their Account screen.	Finance Admin
FR-CUST-064	Customer can top up the KitchenX Wallet via UPI or card; the wallet balance is debited automatically when chosen as the payment method.	End Customer
FR-SYS-006	Pay-later ordering is automatically suspended for an account once it passes the configured grace period unpaid, and automatically restored on payment.	System-wide rule

12 Journey: Credit & Settlement PHASE 2 (continued)

Restored FR carried from v.03.

ID	REQUIREMENT	PERSONA
FR-CUST-050	Customer’s Account screen always shows current outstanding balance, credit limit, and next due date, once the account has a Phase 2 credit line.	End Customer

13 Journey: Platform & Technical Admin Governance

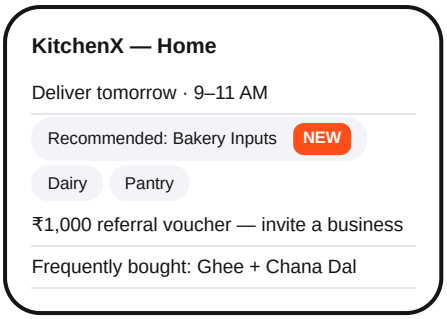

The admin-facing configuration surface for the five reusable modules (Inventory Management is new to this list) and the new Starter Kit/Procurement Audit lead queue.

ID	REQUIREMENT	PERSONA
FR-PAD-030	Platform Admin creates and manages Promotions Engine campaigns.	Platform Admin
FR-PAD-031	Platform Admin creates and manages Offers Suite offers, now including the fully specified Referral offer type (Section 07/25).	Platform Admin / RM
FR-PAD-032	Platform Admin creates and manages Product Listing Engine entries.	Platform Admin
FR-PAD-033	Platform Admin onboards and verifies third-party service providers and configures Services Listing entries; Equipment Servicing provider onboarding is deferred to Phase 3 alongside the Kitchen Appliances line {TAG_P3}.	Platform Admin
FR-PAD-034	**New.** Platform Admin configures the Inventory Management Engine's shared parameters — near-expiry window (days), price-variance threshold (%), Vendor Master fields, and rack/bin numbering scheme — from one admin surface reused by both the warehouse Goods Receipt flow and offline/in-store selling (Section 26).	Platform Admin
FR-PAD-035	**New.** Platform Admin sees a Starter Kit & Procurement Audit lead queue — every marketing-site interest submission — with fields for lead source, interest type (Starter Kit / Procurement Audit), and assigns/reassigns each lead to a Relationship Manager as a high-priority ticket (Section 25).	Platform Admin

Technical Admin functions remain described at a functional level (what can be viewed/configured), not as system architecture, consistent with this document's scope.

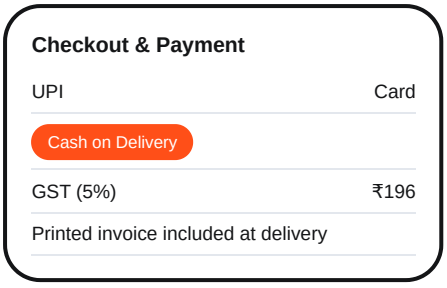

14 Screens: Customer App & Web

The end customer’s complete screen set. Key screens updated for Phase 1 payments, personalisation and referral.

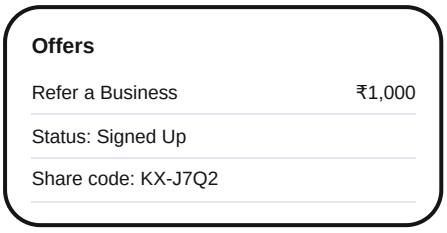

WHAT'S ON SCREEN, AND WHY

1. The Recommended Categories rail is personalised to the merchant’s tagged business category (FR-CUST-098) and reorders as the merchant browses. FR-CUST-010
2. The referral banner links straight to the merchant’s own referral code and current bonus status. FR-CUST-104
3. Frequently Bought Together suggestions appear once an item is in cart, not just on Home. FR-CUST-103

WHAT'S ON SCREEN, AND WHY

1. Pay-later and Wallet tiles are removed for Phase 1; only UPI/Card and the new Cash on Delivery option are shown. FR-CUST-014
2. A COD order states the exact amount due and that change is limited. FR-CUST-102
3. A note confirms a printed GST invoice travels with the shipment, alongside the always-available digital copy. FR-WH-057

WHAT'S ON SCREEN, AND WHY

1. The referral bonus amount is updated from the v.03 mock’s ₹500 example to the confirmed ₹1,000 voucher. FR-SYS-013
2. Referral status is tracked end-to-end: Invited → Signed Up → First Order Placed → Bonus Credited. FR-CUST-105

Removed from the Phase 1 screen set PHASE 3

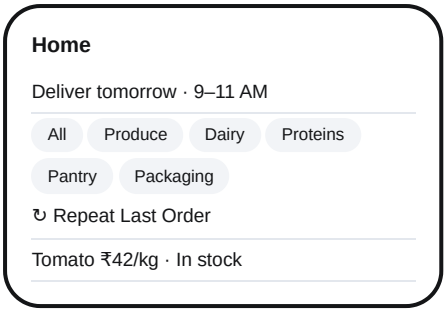

Kitchen Appliances catalogue/product pages and the Kitchen Equipment Servicing option within Services are removed from Phase 1; both return in Phase 3. Apply-for-Credit-Line and Wallet Top-up screens move to Phase 2 PHASE 2.

Unchanged from v.03

Splash/Login, Search & Catalogue, Product Detail, Cart, Order Tracking, Order History, Delivery Confirmation & Consent, Raise Complaint, Talk to X, Customize/Improve Packaging, Services (minus equipment servicing), Bulk Order via Excel, Reports & Analytics, Suggested Basket, and Request Bulk Quote all carry over as specified in v.03.

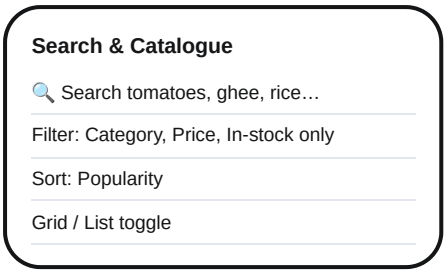

14 Screens: Customer App & Web (continued)

Search & Catalogue, Product Detail, Cart, Order Tracking — restored from v.03 with Phase 1 payment/personalisation updates applied.

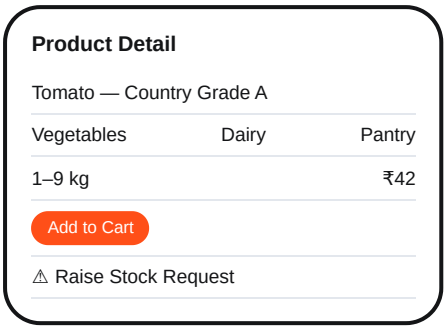

WHAT'S ON SCREEN, AND WHY

1. Category chips let a returning customer jump straight to their usual aisle. FR-CUST-010
2. Stock badges are always visible on the card. FR-CUST-011
3. Bottom tab bar keeps Cart and Orders one tap away at all times — this is a high-frequency, repeat-purchase app. FR-CUST-016
4. "Repeat Last Order" sits near the top of Home. FR-CUST-080
5. Kitchen Appliances is not shown as a chip in Phase 1 PHASE 3.

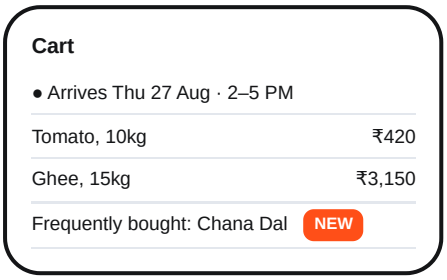

WHAT'S ON SCREEN, AND WHY

1. Full-catalogue browsing with filters (category, price, in-stock only) and a sort control.
2. Splits into Groceries & Staples and Packaging in Phase 1; Kitchen Appliances deferred to Phase 3 PHASE 3.

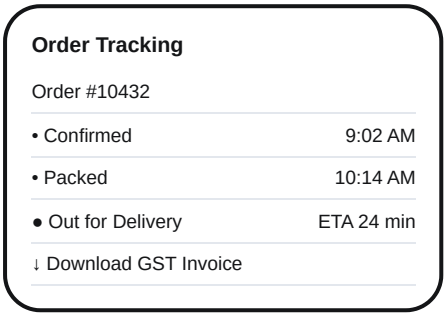

WHAT'S ON SCREEN, AND WHY

1. Bulk price tiers are shown on the product page itself. FR-CUST-061
2. Add to Cart is disabled the moment stock status flips to Out of Stock. FR-CUST-011
3. A secondary category submenu appears under the main nav, scoped to that product's category, benchmarked against Hyperpure. FR-CUST-090
4. "Raise Stock Request" opens a form capturing the customer's full requirement. FR-CUST-088

WHAT'S ON SCREEN, AND WHY

1. Cart groups items by category and shows a running subtotal. FR-CUST-012
2. A Frequently Bought Together rail appears beneath the line items. FR-CUST-103

WHAT'S ON SCREEN, AND WHY

1. All four stages are always shown, not just the current one. FR-CUST-030
2. A single, generic "Delivery contact" field is shown regardless of fulfilment mode. FR-SYS-009
3. Once "Out for Delivery," the map shows the agent's live position and a continuously updating ETA. FR-CUST-097
4. The GST invoice is downloadable from the moment the order is confirmed. FR-CUST-065

14 Screens: Customer App & Web (continued)

Order History, Delivery Confirmation & Consent, Raise Complaint, Talk to X.

Order History

Filters: Date, Outlet, Status

#10432 · Delivered ↻ Reorder

#10398 · Delivered ↻ Reorder

WHAT'S ON SCREEN, AND WHY

1. Past orders filterable by date, outlet and status, each with a one-tap reorder.

Delivery Confirmation & Consent

Confirm Receipt — #10432

📄 View Delivery Challan

Tomato · 10 kg ☐

Ghee · 15 kg ☐

WHAT'S ON SCREEN, AND WHY

1. Consent is captured per line item, not as one order-wide checkbox. **FR-CUST-073**
2. The explanatory copy states plainly what confirming does and does not close off.
3. Confirms against the Delivery Challan — auto-generated at dispatch, independent of the GST invoice. **FR-WH-055**

Raise Complaint

☐ Tomato ☑ Ghee

Missing / Damaged / Wrong item / Quality

📷 Add photo

WHAT'S ON SCREEN, AND WHY

1. Customer selects the specific affected line items, not the whole order. **FR-CUST-040**
2. Photo upload is enforced for Damaged and Quality issue types. **FR-CUST-041**

Talk to X — AI Support Chat

Talk to X ℹ

Where's my order #10432?

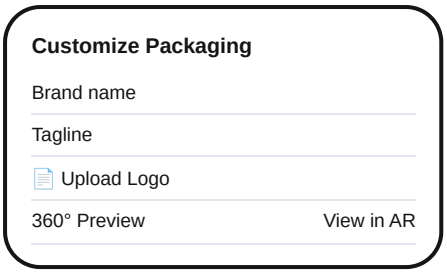

Out for Delivery, ETA 24 min.

WHAT'S ON SCREEN, AND WHY

1. Reachable from a single persistent icon in the topbar on every screen. **FR-CUST-078**
2. The "About this assistant" panel always discloses this is an automated assistant.

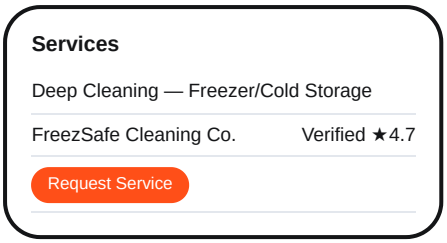

14 Screens: Customer App & Web (continued)

Customize/Improve Packaging, Services, Bulk Order via Excel, Reports, Suggested Basket, Request Bulk Quote.

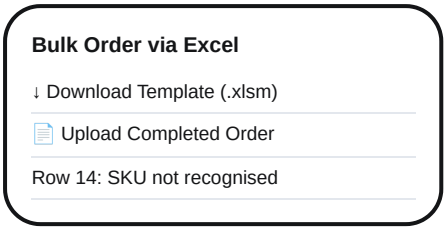

WHAT'S ON SCREEN, AND WHY

1. Brand name, colour, logo and tagline are captured together as one customisation record. FR-CUST-074
2. "360° Preview" only becomes available once a logo is uploaded. FR-CUST-075

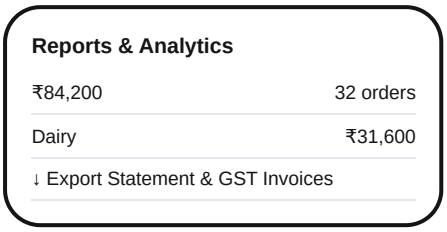

WHAT'S ON SCREEN, AND WHY

1. Deep Cleaning — Freezer/Cold Storage is the flagship category. FR-CUST-095
2. Equipment Servicing is not listed in Phase 1 PHASE 3; returns in Phase 3.

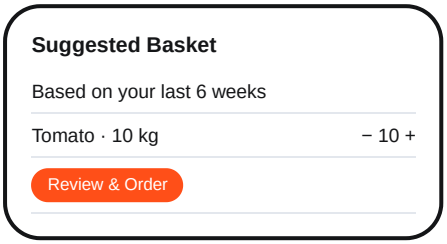

WHAT'S ON SCREEN, AND WHY

1. Only large hotels/chain accounts see this entry point. FR-CUST-081
2. Unrecognised SKUs are flagged back row-by-row, never silently dropped. FR-CUST-083

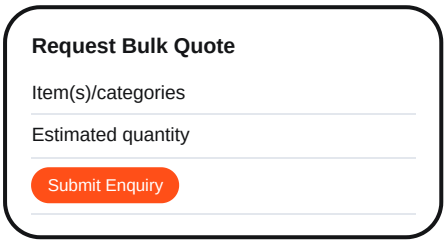

WHAT'S ON SCREEN, AND WHY

1. Spend, order count and outstanding dues are surfaced as a summary strip. FR-CUST-066
2. Export bundles the statement with every GST invoice for the period. FR-CUST-067

WHAT'S ON SCREEN, AND WHY

1. Every line item is editable in place before the customer commits. FR-CUST-091
2. Recalculated weekly, distinct from the literal-copy "Repeat Last Order."

WHAT'S ON SCREEN, AND WHY

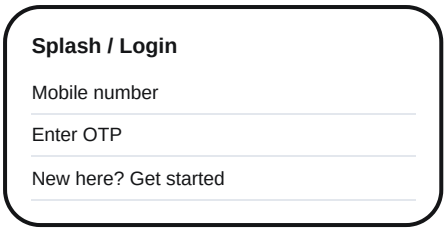

1. Submitting auto-creates a Bulk Quote ticket in the shared ticketing system. FR-CUST-092
2. Routed to the Relationship Manager and Warehouse Manager at the same time. FR-RM-004

SCREEN	PURPOSE	KEY ELEMENTS
Splash/Login	Mobile OTP login	Mobile number field, OTP, "New here? Get started"
Home	Category-led discovery	Search, category chips, deals rail, reorder rail, recommended categories NEW
Search & Catalogue	Full-catalogue browsing	Filters, sort, grid/list toggle
Product Detail	Purchase decision	Bulk price tiers, stock badge, category submenu
Cart	Review & ETA	Category-grouped items, ETA banner, frequently-bought-together NEW

Checkout & Payment	Confirm & pay	UPI/Card/COD tiles NEW, GST breakup, printed-invoice note
Order Tracking	Live status	Status trail, live map, GST invoice download
Order History	Past orders & reorder	Filters, one-tap reorder
Delivery Confirmation & Consent	Per-item acceptance	Per-item checkbox, Delivery Challan reference
Raise Complaint	Post-delivery issue reporting	Issue type, item picker, photo upload
Talk to X	In-app AI chatbot support	Persistent launcher, automated ticket handoff
Customize / Improve Packaging	Brand a packaging SKU	Brand fields, AI 360° preview, AR preview
Offers	Browse & redeem offers	Offer cards incl. Referral NEW
Services	Browse & book services	Excl. Equipment Servicing PHASE 3
Bulk Order via Excel	Spreadsheet-driven ordering	Template download, row-level validation
Reports & Analytics	Spend visibility	KPIs, category breakdown, export
Account	Profile, outlets, notifications	Balance summary now Phase 2 only PHASE 2
Report Unavailable Stock	Capture full requirement when short/out	Product/qty picker, substitute toggle
Suggested Basket	Forecast-based editable basket	Auto-populated line items, Review & Order
Request Bulk Quote	Enquire for a bulk-order quotation	Item/category field, submit

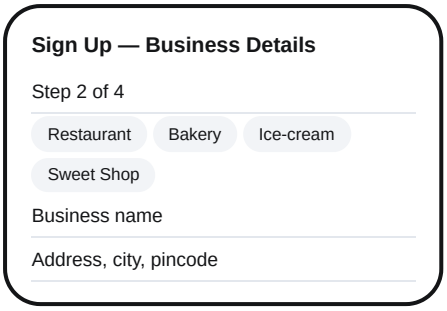

14 Screens: Customer App & Web (continued)

Splash/Login, Sign-Up, Onboarding Document Upload, Improve My Packaging — restored from v.03.

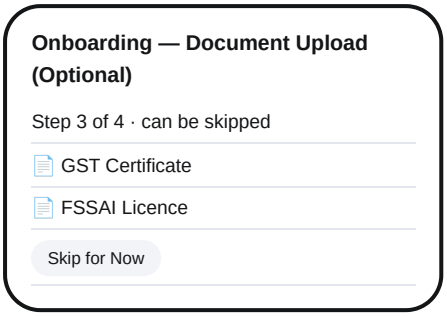

WHAT'S ON SCREEN, AND WHY

1. Mobile OTP login doubles as returning-user recognition — an existing number routes straight to Home, a new one starts sign-up. FR-CUST-001

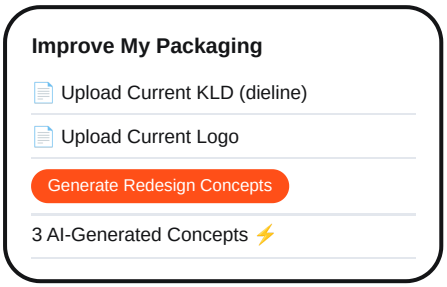

WHAT'S ON SCREEN, AND WHY

1. Business type is a required single-select chip — determines the catalogue and personalisation shown next. FR-CUST-002, FR-CUST-098
2. Continue stays disabled until name and full address are filled in.
3. Pincode drives the default delivery zone used later by the ETA engine.

WHAT'S ON SCREEN, AND WHY

1. A visible 4-step progress bar sets expectations for how much onboarding remains. FR-CUST-002
2. All documents are shown together so the owner can gather paperwork once if they choose to. FR-CUST-003
3. "Skip for Now" is always available — only mobile, name, address and category gate activation; documents never do. FR-CUST-068

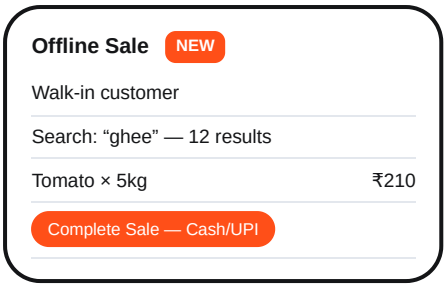

WHAT'S ON SCREEN, AND WHY

1. Upload captures the customer's current KLD, logo, tagline, theme and colour palette. FR-CUST-096
2. "Generate Redesign Concepts" runs an AI model and returns 2–3 distinct redesign concepts. FR-SYS-012
3. Each concept opens into the same AI 360° Preview and AR Outlet Preview already used for standard customisation — no separate viewer.

15 Screens: Warehouse App

Pick List, Goods Receipt and Pack & Dispatch carry over from v.03; the new Offline Sale screen is added.

WHAT'S ON SCREEN, AND WHY

1. A walk-in/offline sale is created and completed on this same app — never off-system — so the Inventory Management Engine decrements stock exactly as an online order does. FR-WH-059
2. The powerful search used for manual Goods Receipt (FR-WH-058) is reused here for fast product lookup at a physical counter. FR-WH-059
3. A GST invoice (5%, with printed copy) is generated for the offline sale exactly as for an online order. FR-WH-060

ID	REQUIREMENT	PERSONA
FR-WH-059	**New.** A Warehouse Supervisor/store staff member can record an offline/walk-in sale from the Warehouse App: search or scan the product(s), enter quantity, and complete the sale against Prepaid/UPI or Cash payment; on completion, the Inventory Management Engine decrements stock in the same instant and by the same mechanism as an online dispatch (Section 26), so the 100% match rule (Rule SYS-01) is never broken by an in-person sale.	Warehouse Supervisor
FR-WH-060	**New.** Every completed offline sale auto-generates a GST invoice (5%) with a printed copy handed to the walk-in customer at the counter, using the same invoicing engine as online orders (FR-CUST-065, FR-WH-057).	Warehouse Supervisor

Pick List, Goods Receipt — QR Scan (now with the powerful manual search tab), Route Assignment, Loading & Dispatch, and Stock Count/Reconciliation screens carry over from v.03 with the manual-search enhancement noted in Section 09.

15 Screens: Warehouse App (continued)

Pack & Dispatch, Route Assignment, Stock Count & Reconciliation, Reports — restored from v.03.

Pick List

Pick List #4021

A-04 Tomato 10kg ☐

B-11 Ghee 15kg ☐

Report Short Pick

WHAT'S ON SCREEN, AND WHY

1. Rows are pre-sorted by rack code so the supervisor walks the warehouse once, in order. FR-WH-010
2. "Report Short Pick" is always visible, never buried. FR-WH-012

Pack & Dispatch

Pack Order #10432

☑ Tomato · 10 kg

📷 Start Recording — Pack Station Cam

Printed GST invoice inserted NEW

WHAT'S ON SCREEN, AND WHY

1. Packing Slip only generates once every line item is checked off. FR-WH-041
2. "Confirm Packed" stays disabled until the pack-proof video, at least two post-pack photos, and the printed GST invoice are all on file. FR-WH-051, FR-WH-057

Route Assignment

#10432 Jubilee Hills 45 kg · Route A

Route A · 6 stops 320/500 kg

Confirm Routes & Dispatch

WHAT'S ON SCREEN, AND WHY

1. Orders are grouped into a route by delivery zone automatically. FR-WH-042
2. Each route shows running weight against the assigned vehicle's capacity. FR-WH-043

Stock Count & Reconciliation

Tomato 42kg → 45kg (+3)

Reason: Miscount

Submit Adjustments

WHAT'S ON SCREEN, AND WHY

1. Variance is calculated live as the Manager types in the physical count. FR-WH-044
2. A reason is mandatory for every non-zero adjustment. FR-WH-008

Reports & Analytics (Manager)

Stock Accuracy 99.4%

On-Time Dispatch 96%

Short-Pick Rate 0.6%

WHAT'S ON SCREEN, AND WHY

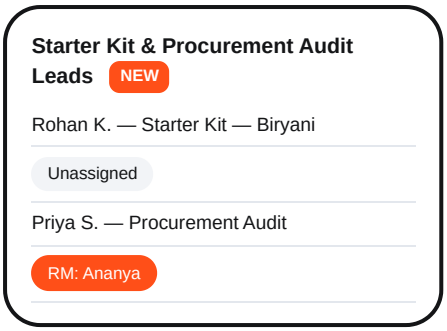

1. Stock Accuracy is the app-vs-physical match rate from Rule SYS-01, tracked as the warehouse's core health metric. FR-WH-045

SCREEN	PURPOSE	KEY ELEMENTS
Dashboard	Daily overview	Pending receipts/picks, today's dispatch count, alerts
Goods Receipt	Stock intake	QR/manual-search toggle, quantity, batch, expiry, rack
Offline Sale	Walk-in selling NEW	Search/scan, quantity, Cash/UPI, printed invoice
Pick Lists	Order fulfilment	Rack-sorted list, scan-to-confirm, short-pick reporting
Pack & Dispatch	Prepare & hand off orders	Packing checklist, packing slip, printed invoice check NEW
Route Assignment	Group orders into vehicle routes	Zone map, vehicle capacity, stop sequencing
Stock Count / Reconciliation	Audit & adjust stock	System vs. physical count, variance, adjustment reason

Reports & Analytics	Operational visibility	Stock accuracy, on-time dispatch, short-pick rate

16 Screens: Platform Admin

New: a Starter Kit / Procurement Audit lead queue and Inventory Management Engine configuration.

WHAT'S ON SCREEN, AND WHY

1. Every marketing-site interest submission lands here as a high-priority ticket, assignable to an RM in one action. **FR-PAD-035**
2. Interest type (Starter Kit vs. Procurement Audit) and any kit preference captured on the marketing site is shown verbatim. **FR-RM-005**

Onboarding Queue, Catalogue & Pricing, Order Monitoring & Exceptions, Delivery Partner Management (now showing the full integrated courier roster), Promotions/Offers/Product/Services Listing managers, and Reports carry over from v.03.

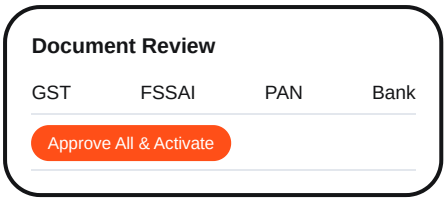

16 Screens: Platform Admin (continued)

Onboarding review, Catalogue & Pricing, Complaints, Stock Alerts — restored from v.03.

WHAT'S ON SCREEN, AND WHY

1. Queue sorts oldest-pending first by default. **FR-PAD-001**

WHAT'S ON SCREEN, AND WHY

1. Each document is reviewed individually, but the whole application activates in one action once all are approved. **FR-PAD-026**

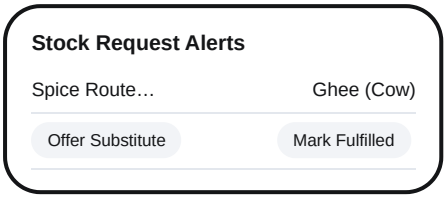

WHAT'S ON SCREEN, AND WHY

1. Bulk price tiers are edited inline per SKU. **FR-PAD-021**

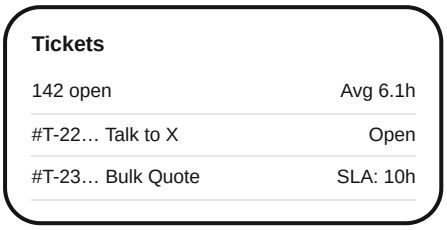

WHAT'S ON SCREEN, AND WHY

1. Complaints sort oldest-first with an SLA-ageing badge. **FR-PAD-010**

WHAT'S ON SCREEN, AND WHY

1. Every alert shows the customer's full captured requirement. **FR-PAD-029**

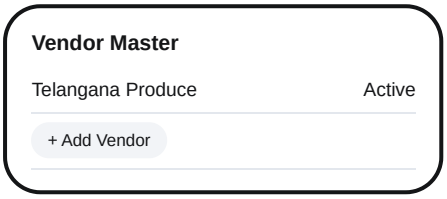

WHAT'S ON SCREEN, AND WHY

1. One queue regardless of source — complaint, RM escalation, chatbot handoff, and now Starter Kit/Procurement Audit leads. **FR-CUST-077**

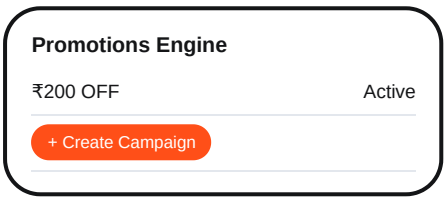

WHAT'S ON SCREEN, AND WHY

1. The widget lists every batch inside the near-expiry window, refreshed daily. **FR-PAD-024**

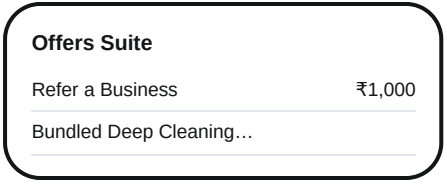

WHAT'S ON SCREEN, AND WHY

1. Every inward vendor is registered once here; Goods Receipt and inward bills must reference it. **FR-PAD-025**

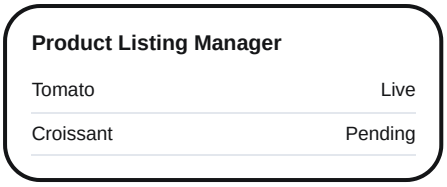

WHAT'S ON SCREEN, AND WHY

1. A campaign only goes live once its status is Active and within its configured window. **FR-PAD-030**

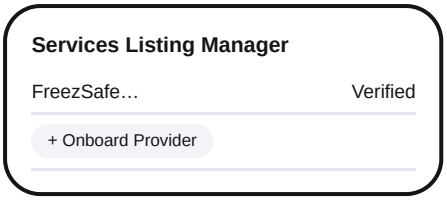

WHAT'S ON SCREEN, AND WHY

1. The Referral offer is now a fully specified value (₹1,000), not an example placeholder. FR-PAD-031

WHAT'S ON SCREEN, AND WHY

1. Every SKU (grocery or Packaging) runs through the same price/placement/duration/approval fields. FR-PAD-032

WHAT'S ON SCREEN, AND WHY

1. Provider onboarding requires verification before a listing goes live. FR-PAD-033

SCREEN	PURPOSE	KEY ELEMENTS
Onboarding Queue	Approve/reject new customers	Document viewer, approve/reject with reason
Catalogue & Pricing	Manage SKUs & prices	Category tree, SKU editor, stock threshold
Order Monitoring	Track & intervene on orders	Live order list, exception flags
Delivery Partner Mgmt	Manage courier integrations	Full partner roster, performance view NEW
Near-Expiry Stock	Move ageing stock	Daily-refreshed batch list, campaign action
Vendor Master	Inward vendor registry	Vendor list, GSTIN, active/inactive
Promotions Engine	Configure discount campaigns	Type/value/eligibility/date/usage-cap
Offers Suite	Configure eligibility offers	Type/eligibility/value/validity, incl. Referral NEW
Product Listing Manager	Govern catalogue listings	Pending/live/expired queue
Services Listing Manager	Onboard providers & list services	Verification status, coverage
Starter Kit/Procurement Leads NEW	Consulting lead queue	Interest type, RM assignment
Stock Request Alerts	Queue of stock-unavailability requests	Product/qty, substitute preference
Tickets	Unified issue queue	Source/status/assignee/age, SLA countdown
Reports & Analytics	Business visibility	Sales/order KPIs, complaint trends, export

17 Screens: Finance Admin

Re-scoped for Phase 1: invoicing and COD cash reconciliation replace credit-limit management, which moves to Phase 2.

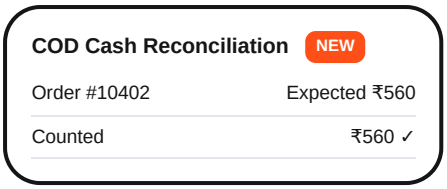

ID	REQUIREMENT	PERSONA
FR-FIN-037	**New.** A daily Cash Reconciliation view lists every COD order collected that day, its expected vs. counted cash amount, and flags variances for Warehouse Manager/Finance Admin follow-up.	Finance Admin

FR-FIN-021 (Outstanding Dues screen) PHASE 2 — kept at full detail as FR-FIN-031 in Section 28's Credit Limits & Collections screen rather than duplicated here.

GST Invoices, Refunds & Credit Notes, and Settlements (for prepaid Razorpay/Cashfree transactions) carry over from v.03; Credit Limits management moves to Phase 2 (Section 28).

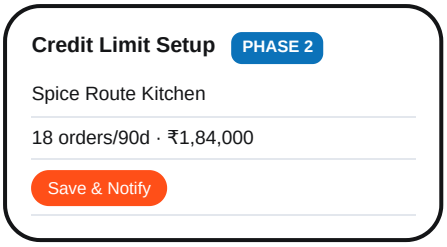

17 Screens: Finance Admin (continued)

Credit Limit Setup (Phase 2), Outstanding Dues, GST Invoices, Refunds, Inward Bills — restored from v.03.

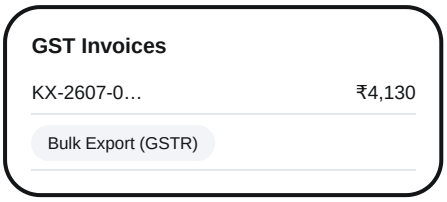

WHAT'S ON SCREEN, AND WHY

1. Every COD order collected that day is listed with expected vs. counted cash, flagging variances. FR-FIN-037

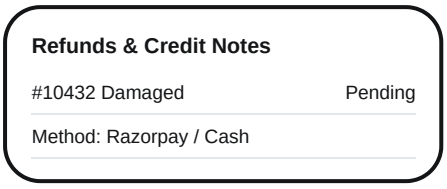

WHAT'S ON SCREEN, AND WHY

1. The customer's own order history sits next to the form. FR-FIN-030
2. Phase 2 only — no credit-granting path exists in Phase 1 (Rule SYS-15).

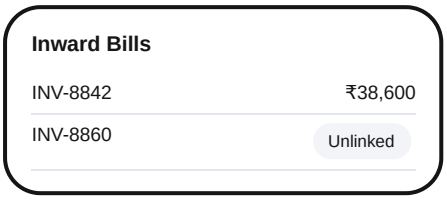

WHAT'S ON SCREEN, AND WHY

1. Every invoice is searchable by number, customer or GSTIN. FR-FIN-032

WHAT'S ON SCREEN, AND WHY

1. Refunds route here from Platform Admin's complaint resolution. FR-FIN-010

WHAT'S ON SCREEN, AND WHY

1. A bill with no matching Goods Receipt is flagged "Unlinked." FR-WH-049

SCREEN	PURPOSE	KEY ELEMENTS
COD Cash Reconciliation NEW	Daily cash collection check	Expected vs. counted, variance flag
Credit Limits PHASE 2	Set & review customer credit	Limit/cycle editor, approval history
Settlements	Reconcile payments	Razorpay/Cashfree transaction list
Outstanding Dues PHASE 2	Collections	Overdue list by ageing bucket
Refunds & Credit Notes	Process complaint outcomes	Pending refund queue, approval trail
GST Invoices	Tax invoice management	Search, re-download, bulk GSTR export
Inward Bills	Vendor bill tracking	Bill #, vendor, amount, linked GRN
Reports & Analytics	Collections & credit visibility	Outstanding total, collection rate

18 Screens: Technical Admin

Unchanged in structure; Integration Health now surfaces the full B2B delivery-partner roster.

ID	REQUIREMENT	PERSONA
FR-TAD-006	The Express delivery fee (and, separately, the Standard/Express eligibility rules by zone) is a configurable value set by Technical Admin in System Configuration, never hardcoded in app/web code; Platform Admin can view but not edit it.	Technical Admin
FR-TAD-007	Technical Admin's System Configuration/Integration Health screens expose the delivery-partner tracking API integrations used to power live order tracking — connection status, last-sync time, and API key/credential management — now covering every integrated courier partner, not a single default. **FR-SYS-003**	Technical Admin

Users & Roles, System Configuration, Master Data and Reports (usage/audit) carry over unchanged from v.03.

18 Screens: Technical Admin (continued)

Users & Roles, System Configuration, Integration Health, Master Data — restored from v.03.

Users & Roles

Ravi K.	WH Supervisor

+ Invite User

WHAT'S ON SCREEN, AND WHY

1. Each internal user gets exactly one of the seven roles defined in Section 04. FR-TAD-001

System Configuration

Fleet-vs-courier threshold	25 kg/zone
Near-expiry alert window	7 days
Price variance threshold	8%
COD ceiling NEW	₹15,000
Standard delivery fee	₹0 (included)
Express delivery fee	₹49

WHAT'S ON SCREEN, AND WHY

1. The fleet-vs-courier threshold set here is exactly the rule the ETA engine applies (Section 08). FR-TAD-002
2. A new configurable COD ceiling caps single-order cash-on-delivery value for delivery-agent cash safety.
3. The Express delivery fee (and the Standard/Express eligibility rules by zone) is a configurable value set here, never hardcoded in app/web code; Platform Admin can view but not edit it. FR-TAD-006

Integration Health

Bank API	Up
Courier Partner APIs (all)	Up NEW
Google Maps Platform	Up

WHAT'S ON SCREEN, AND WHY

1. Now surfaces every integrated courier partner individually, not a single default. FR-SYS-003, FR-TAD-007

Master Data

- Categories
- Units of measure
- Warehouse/rack registry

WHAT'S ON SCREEN, AND WHY

1. Shared reference data used across every console.

SCREEN	PURPOSE	KEY ELEMENTS
Users & Roles	Manage internal accounts	User list, role assignment, activate/deactivate
System Configuration	Business-rule settings	Zones, thresholds, SLA timers, COD ceiling NEW
Integration Health	Functional status view	Bank API, full courier roster NEW, QR service, Maps
Master Data	Shared reference data	Categories, units, warehouse/rack registry
Reports & Analytics	Platform usage & audit	Active-user counts, login activity, audit log

19 Business Rules & Data Integrity

Non-negotiable rules called out explicitly for this platform. SYS-01 through SYS-14 carry over from v.03; SYS-15–SYS-17 are new in v0.4.

ID	REQUIREMENT	PERSONA
SYS-01	Warehouse physical inventory and app/web-displayed inventory must match 100% at all times, across both online and offline/in-store sales channels.	System-wide rule
SYS-02	At platform launch, the warehouse's existing physical stock must be fully reflected in the app before customers can place orders.	System-wide rule
SYS-03	No item may be added to sellable inventory without a completed quantity update in the system — via QR scan or manual search fallback.	System-wide rule
SYS-04	When an item is sold and dispatched (online or offline), its quantity must decrease in the system in the same moment it physically leaves the warehouse/counter.	System-wide rule
SYS-05	A short pick must never result in a silent partial shipment — it always creates a visible exception for Platform Admin.	System-wide rule
SYS-06	Every customer-facing delivery promise (ETA) must be traceable to either a real fleet route/vehicle or a real, currently-queried courier-partner quote.	System-wide rule
SYS-07	Every confirmed order must have a GST-compliant tax invoice generated at 5% — with correct GSTIN, HSN/SAC and tax breakup — and a printed copy queued for physical inclusion, before it can be marked "Packed."	System-wide rule
SYS-08	Any goods receipt, quotation, proforma invoice or bill whose unit price varies from the reference price by more than the configured threshold must raise a price-variance alert before being treated as final.	System-wide rule
SYS-09	No credit line may be granted without a completed set of KYC documents, bank statements, IT returns, and physical verification on file PHASE 2; this entire capability, and thus this rule, applies from Phase 2 onward — Phase 1 has no credit-granting path at all.	System-wide rule
SYS-10	Any customer issue or ticket assigned to a Relationship Manager that remains unresolved 12 business hours after being raised automatically escalates to Platform Admin.	System-wide rule
SYS-11	Fulfilment mode (own fleet vs. any integrated courier partner) is a backend dispatch decision only and must never be exposed as a selectable option or displayed attribute to the customer.	System-wide rule
SYS-12	Once a customer records per-item delivery consent, no return/refund claim is accepted for a reason that was reasonably visible/checkable at delivery; concealed defects remain claimable within the complaint window.	System-wide rule
SYS-13	A Bulk Quote ticket must be actioned within 24 business hours, with automatic reminders every 12 hours, escalating to Platform Admin at 48 hours.	System-wide rule
SYS-14	A Promotions Engine campaign and an Offers Suite offer do not both apply to the same order line item unless the campaign is explicitly configured as stackable.	System-wide rule
SYS-15	**New.** Phase 1 accepts only Prepaid (UPI/card via Razorpay/Cashfree) and Cash on Delivery as payment methods; no screen, API or admin configuration may expose a Pay-later or Wallet option until the platform is explicitly switched into Phase 2.	System-wide rule
SYS-16	**New.** A referral bonus (₹1,000) is credited only once the referred merchant's first order reaches "Confirmed" status — never on signup alone — to prevent incentive abuse via unconverted signups.	System-wide rule
SYS-17	**New.** Kitchen Appliances/Equipment SKUs and Equipment Servicing listings must not be visible, orderable, or bookable anywhere in the Phase 1 customer-facing app/web or marketing site; both are gated behind the Phase 3 rollout flag.	System-wide rule

20 Roles & Permissions Matrix

✓ Full access — — No access — Scoped/partial access. Updated: credit-limit rows marked Phase 2; two new rows for offline selling and consulting leads.

CAPABILITY	END CUST.	WH SUPERVISOR	WH MANAGER	PLATFORM ADMIN	FINANCE ADMIN	TECH ADMIN	RM

Starter Kit/Procurement Audit lead assigned NEW	Relationship Manager	✓	—	✓	—
Bulk Quote ticket created	Relationship Manager / WH Manager	✓	—	✓	✓
Price variance beyond threshold detected	WH Manager / Platform Admin / Tech Admin	✓	—	✓	—

All events already specified in v.03 (short pick, RM escalation, ticket SLA breach, stock request alerts, pack-proof video, offers eligibility, service requests) carry over unchanged.

22 Phased Rollout Plan

Materially revised in v0.4: Phase 1 gains Starter Kit/Procurement Audit, Inventory Mgmt Engine, offline selling, referral and personalisation. Credit/Wallet moves to Phase 2. Kitchen Appliances/Equipment moves to Phase 3.

PHASE 1

Hyderabad · single warehouse

- Prepaid + COD payments
- Starter Kit & Procurement Audit
- Inventory Mgmt Engine
- Offline/in-store selling
- Referral programme & personalisation

PHASE 2

Bengaluru expansion

- Pay-later credit-line
- KitchenX Wallet
- WhatsApp ordering
- Behaviour-based buying segmentation
- Multi-warehouse routing

PHASE 3

Multi-city

- Kitchen Appliances/Equipment
- Equipment Servicing
- Cross-city transfers

Fig 22.1 — Phase-by-phase capability rollout at a glance.

	PHASE 1 — HYDERABAD, SINGLE WAREHOUSE	PHASE 2	PHASE 3
Core marketplace	All personas, flows, GST invoicing (5% + printed copy), Prepaid + COD payments	Add Bengaluru / second warehouse; multi-warehouse routing; WhatsApp ordering	Multi-city, cross-city transfers
Payments	Prepaid, COD	**Pay-later credit-line, KitchenX Wallet** PHASE 2 (full spec: Section 28)	—
Catalogue	Groceries & Staples, Packaging	—	**Kitchen Appliances/Equipment** PHASE 3 (full spec: Section 29)
Services Listing	Deep Cleaning and similar commercial-kitchen services	Full Services Listing Engine rollout	**Equipment Servicing** PHASE 3 (Section 29)
Reusable modules	Promotions, Offers (incl. Referral), Product Listing, **Inventory Management** NEW	Services Listing Engine full rollout	—
New consulting lines	**Starter Kit & Procurement Audit** (lead capture & ticketing) NEW	—	—
Personalisation	Recommended categories, category-based nav, frequently-bought-together, category-history recommendations NEW	**Behaviour-based buying segmentation** PHASE 2	—
Selling channel	Online + **offline/in-store selling via Inventory Mgmt Engine** NEW	—	—

Resolved in this revision: v.03 stated "Kitchen Equipment/Appliances is already in scope for Phase 1." The 19 Sept 2026 MoM explicitly defers both the equipment product line and equipment servicing to Phase 3. v.03 also listed pay-later credit-line and KitchenX Wallet as Phase 1; the 15 Sept 2026 MoM defers both to Phase 2. Suggested Basket, Bulk Quote, near-expiry alerts and Vendor Master remain Phase 1, reconfirmed by the 15 Sept 2026 MoM with no change.

23 Assumptions & Open Items

Carried over from v.03, plus new items raised by the Starter Kit, Procurement Audit and Inventory Management additions.

#	ITEM	ASSUMPTION MADE FOR THIS DRAFT
1	Supplier/procurement side	Assumed out of scope — this document covers KitchenX selling to restaurants, not KitchenX buying from its own suppliers.
2	Pricing model	Assumed a single published price list per SKU with possible bulk-quantity tiers, not per-customer negotiated pricing.
3	Minimum order value	Assumed a configurable minimum order value/quantity exists but the exact threshold is not yet defined.
4	Fleet-vs-courier threshold rule	Assumed a configurable rule (quantity/weight/zone based), likely needing tuning post-launch.
5	Complaint response window	Assumed 24 hours post-delivery for defects not reasonably visible/checkable at delivery.
6	Language	Assumed English + Telugu for Hyderabad launch, extending to English + Kannada for Bengaluru.
7	Existing lead data	GST/business-registry leads for Telangana assumed to feed acquisition/sales outreach outside this app.
8	"Talk to X" AI disclosure	Frames the requirement as "feels like fast, human-quality support" with an always-visible disclosure panel.
9	Product/Services Listing monetisation	Whether/how KitchenX charges a listing fee or commission is not yet specified.
10	Banking-API partner	Section 12's bank-API fund confirmation assumes a single partner bank; not yet finalised.
11	Starter Kit delivery mechanics NEW	This document specifies lead capture, ticketing and RM assignment only. The kit design methodology, KitchenX cost-audit process, and whether a kit later becomes an orderable catalogue bundle are business decisions outside this draft's functional scope.
12	Procurement Audit methodology NEW	Assumed to be a human-delivered consulting engagement (not an automated report) for this draft; needs confirmation.
13	Starter Kit/Procurement Audit monetisation NEW	Pricing/fee model for either consulting product is not yet specified — needs a business decision.
14	Inventory Management Engine benchmark NEW	The Walmart/Amazon case-study reference from the 15 Sept 2026 MoM is treated as a functional-design inspiration (single shared stock source of truth, fast search) rather than a specific integration or licensed technology.
15	COD cash-handling limits NEW	Assumed a configurable per-order COD ceiling will be needed for delivery-agent cash-safety reasons; exact limit not yet defined.

24 MoM Change Log NEW

Every point raised in the 15 Sept 2026 and 19 Sept 2026 meetings, mapped to where it landed in this document, for the vendor's and KitchenX's own traceability.

SOURCE	MOM POINT (PARAPHRASED)	LANDED IN
15 Sept	KitchenX Starter Kit: consulting business, cost audit, cuisine/burger/biryani/pizza kits	Section 02, 25
15 Sept	Base product: reusable Inventory Management module, QR + powerful manual search, Walmart/Amazon-style benchmark	Section 02, 09, 26
15 Sept	Outward movement via online + offline/store-based selling, both through web/app	Section 26, 15
15 Sept	Reusable promotions & offers across full product suite	Section 02 (reconfirmed, no change)
15 Sept	USP: Procurement Audit product/service	Section 25
15 Sept	USP: Starter Kit consulting, marketing-site interest → high-priority ticket → RM assigned	Section 25
15 Sept	Suggested basket in Phase 1	Section 02, 07, 09 (reconfirmed, no change)
15 Sept	Request for bulk quote in Phase 1	Section 02, 11 (reconfirmed, no change)
15 Sept	Equipment business moved to Phase 3	Section 02, 05, 14, 22
15 Sept	Equipment servicing moved to Phase 3	Section 02, 05, 13, 22
15 Sept	Four notification types (app, SMS/messaging, WhatsApp, email) in Phase 1	Section 02, 21 (reconfirmed, no change)
15 Sept	Near-expiry stock alerts in Phase 1	Section 02, 09 (reconfirmed, no change)
15 Sept	Vendor master in Phase 1	Section 02, 09 (reconfirmed, no change)
15 Sept	No credit/wallet in Phase 1; only prepaid and COD	Section 02, 07, 12, 19, 20, 22
15 Sept	GST invoice, 5%, physical copy with delivery, in Phase 1	Section 02, 07, 10, 19
15 Sept	Inward bills tracked in Phase 1	Section 02, 09 (reconfirmed, no change)
15 Sept	Multi-city and multi-warehouse in later phases	Section 02, 22 (reconfirmed, no change)
19 Sept	Recommended categories shown on merchant/customer login	Section 05, 07, 27
19 Sept	Left menu customised by products selected/browsed	Section 05, 27
19 Sept	Merchant tagged to category at onboarding; category-specific menu with search override	Section 06, 27
19 Sept	Phase 2: behaviour-based buying personalisation	Section 22, 27
19 Sept	Frequently-bought-together / market-basket recommendation in cart	Section 07, 27
19 Sept	Phase 1: past-category-purchase-based product/ad surfacing on login	Section 27
19 Sept	Phase 1: fully functional referral, ₹1,000 voucher	Section 02, 07, 19, 25
19 Sept	Marketing site + merchant login: category-specific product views (bakery, coffee shop, etc.)	Section 27

19 Sept	Phase 1: majority of B2B delivery partners integrated, intelligent parcel-aware selection, independent module	Section 02, 03, 08

25 KitchenX Starter Kit & Procurement Audit NEW

Two new consulting/advisory products introduced in the 15 Sept 2026 MoM — KitchenX's point of difference from every benchmarked competitor (Section 03).

NEW PRODUCT

KitchenX Starter Kit

A complete consulting business for people who want to start a restaurant, bakery, sweet shop or similar F&B outlet. KitchenX designs the kit and runs a KitchenX cost audit for the aspiring entrepreneur, covering:

- Cuisine kits
- Burger kits
- Biryani kits
- Pizza kits

Delivered as consulting engagements, not a self-serve product purchase.

NEW PRODUCT

Procurement Audit

A standalone service for existing F&B businesses: KitchenX audits the business's current procurement process and recommends optimisations — independent of whether the business becomes a KitchenX ordering customer.

How a lead becomes an engagement

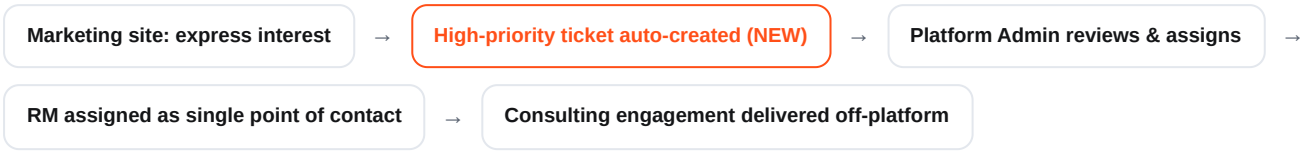

Fig 25.1 — From a tech standpoint, this is a lead-capture + ticketing + RM-assignment flow, not a build of the consulting service itself.

ID	REQUIREMENT	PERSONA
FR-CUST-106	On the KitchenX marketing/sales website, a "Starter Kit" section lets a visitor express interest, selecting a kit type (Cuisine, Burger, Biryani, Pizza, or "Not sure yet / General consulting") and leaving contact details and a free-text note.	End Customer
FR-CUST-107	On the marketing site, a separate "Procurement Audit" section lets a visitor (an existing F&B operator) request an audit of their current procurement process, capturing business name, category, city, and contact details.	End Customer
FR-SYS-014	Submitting either FR-CUST-106 or FR-CUST-107 auto-generates a high-priority ticket in the platform's single shared ticketing system (Section 11), tagged by interest type (Starter Kit / Procurement Audit) and kit sub-type where applicable.	System-wide rule
FR-PAD-035	Platform Admin sees every Starter Kit/Procurement Audit ticket in a dedicated queue and assigns it to a Relationship Manager (Section 13/16).	Platform Admin
FR-RM-005	The assigned RM owns the lead through to a logged outcome (engaged, declined, no response), tracked with the same Open → In Progress → Resolved status used for other tickets, with all notes/actions in the shared audit trail (FR-SYS-010).	Relationship Manager

Scoping note: This document specifies the platform's role as lead capture, prioritised ticketing, and RM assignment for both products. The actual consulting delivery (kit design, cost-audit methodology, procurement recommendations) is a business/operations process outside this app's functional scope, and is flagged as an open item in Section 23 for further definition (e.g. whether a kit's bill-of-materials should later become an orderable bundle in the core catalogue).

26 Inventory Management Engine & Offline/Store-Based Selling NEW

Formalises Inventory Management as KitchenX's fifth reusable platform module (per the 15 Sept 2026 MoM) and specifies offline/in-store selling as a second consumer of it, alongside the existing online flow.

Why a dedicated, reusable module

Goods Receipt (Section 09) has always driven inventory inward; this revision makes that capability an explicitly reusable, independently addressable engine — benchmarked against how large-scale retailers (Walmart, Amazon) separate inventory management from any single selling channel — so any future KitchenX business line (in-store counters, a second warehouse, a licensing partner) plugs into the same engine rather than rebuilding stock logic per channel.

INWARD

QR Scan or Manual Search

Goods receipt via QR/barcode scan, or manual entry backed by a powerful type-ahead product search (FR-WH-058) — never a slower fallback than scanning.

OUTWARD — ONLINE

Customer App/Web Orders

Existing flow (Sections 07/10): reserved at order confirmation, decremented at dispatch.

OUTWARD — OFFLINE NEW

Store-Based / Walk-In Selling

A walk-in customer's purchase is still transacted through the Warehouse App or Web (never off-system, e.g. a paper receipt book) — see FR-WH-059 — so the same reservation/decrement rules (Rule SYS-01–SYS-04) apply identically.

ID	REQUIREMENT	PERSONA
FR-SYS-015	**New.** The Inventory Management Engine exposes one shared stock-decrement API used identically by online dispatch (FR-SYS-005) and offline sale completion (FR-WH-059), so the 100% physical-vs-app match rule (Rule SYS-01) holds regardless of which channel sold the item.	System-wide rule
FR-WH-058	The Manual entry tab (Goods Receipt and Offline Sale) includes a powerful product search — type-ahead across SKU, name, category, vendor.	Warehouse Supervisor
FR-WH-059	A Warehouse Supervisor/store staff member records an offline/walk-in sale from the Warehouse App or Web, always against live inventory.	Warehouse Supervisor
FR-WH-060	Every completed offline sale auto-generates a GST invoice (5%) with printed copy, using the same invoicing engine as online orders.	Warehouse Supervisor
FR-PAD-034	Platform Admin configures the Inventory Management Engine's shared parameters from one admin surface reused by both channels.	Platform Admin

Case-study framing (per the 15 Sept 2026 MoM): the module is designed around the same separation of concerns that large-scale retail inventory systems use — a single source of truth for stock level, updated by every inward and outward event regardless of channel, rather than per-channel stock counters that need reconciliation. This document specifies the functional behaviour that separation requires (shared reservation/decrement API, shared search, shared alerts); the underlying data architecture is left to the development partner, consistent with this document's scope.

27 ✧ Merchant Personalization & Recommendations NEW

Category-based personalisation, recommended categories, and frequently-bought-together recommendations, per the 19 Sept 2026 MoM. Behaviour-based buying segmentation is explicitly Phase 2.

ID	REQUIREMENT	PERSONA
FR-CUST-098	The business type captured at onboarding (FR-CUST-002) is stored as the merchant's primary category tag.	End Customer
FR-CUST-100	**New.** On login/Home, a Recommended Categories rail is shown, ordered primarily by the merchant's tagged category (e.g. a coffee shop sees coffee-related categories first) and secondarily by the merchant's own recent browsing/order history; a persistent "See all categories" control always remains available so the merchant can search/browse outside their tagged category without restriction.	End Customer
FR-CUST-101	**New.** The left-hand catalogue navigation menu (web) / category chip order (app) re-ranks dynamically toward categories the merchant has recently browsed or ordered from, while always keeping every category reachable — personalisation narrows what's shown first, never what's accessible.	End Customer
FR-CUST-108	**New.** The public marketing site (pre-login) offers the same category-specific browsing entry points as the merchant login — e.g. dedicated landing views for "Bakery," "Coffee Shop," "Sweet Shop" — so a prospective customer can see relevant products/categories before signing up.	End Customer
FR-CUST-103	The moment an item is added to cart, a "Frequently Bought Together" rail suggests items commonly ordered alongside it (market-basket recommendation), each addable in one tap.	End Customer
FR-CUST-109	**New, Phase 1.** If a customer has purchased a given category in the past (e.g. masalas/spices), their next login surfaces products and promotional banners related to that category — a simple purchase-history-based recommendation, distinct from the broader behaviour-segmentation feature below.	End Customer
FR-CUST-110	**Phase 2** PHASE 2**.** Customers are segmented by buying behaviour (e.g. discount-sensitive vs. not) and the menu/offer surfacing is customised per segment — a broader personalisation capability than FR-CUST-109's category-history recommendation, deferred to Phase 2 pending a defined segmentation model.	End Customer

Relationship between the three recommendation features: Recommended Categories (FR-CUST-100) is category-tag-driven and static per merchant type; category-history recommendations (FR-CUST-109) react to what that specific merchant has bought before; Frequently Bought Together (FR-CUST-103) reacts to what's in the cart right now, aggregated across all customers. All three are Phase 1. Full behaviour-based segmentation (FR-CUST-110) is a materially larger data/modelling effort and is the one personalisation item deferred to Phase 2, per the 19 Sept 2026 MoM.

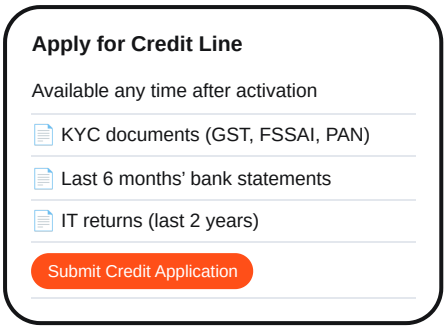

28

Phase 2 Specification — Credit, Wallet & WhatsApp Ordering PHASE 2

Everything moved out of the Phase 1 build in this revision, kept here at full detail (not deleted) so the development partner can plan for it. None of this ships in Phase 1 (Section 02/12/22).

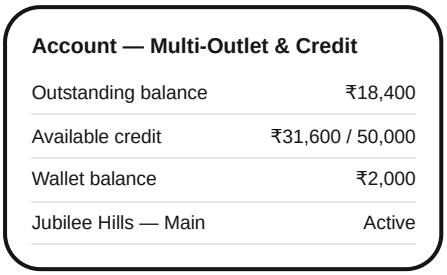

Why this moved: the 15 Sept 2026 MoM was explicit — no credit or wallet feature in Phase 1; only prepaid and Cash on Delivery. This section preserves the full v.03 specification for credit-line, KitchenX Wallet, and Phase 2's WhatsApp ordering and behaviour-based personalisation, unchanged in substance from v.03 except where noted.

Credit-Line Application & Wallet — Customer Screens

WHAT'S ON SCREEN, AND WHY

1. Unlike basic onboarding, every item here is mandatory — KYC docs, bank statements, IT returns and a physical facility visit — before Finance Admin can approve a credit limit. FR-CUST-069
2. Submit stays disabled until all uploads are attached and a verification slot is chosen. FR-FIN-035
3. The customer can keep ordering prepaid/COD while a credit application is pending — it is never a blocker on ordering itself.

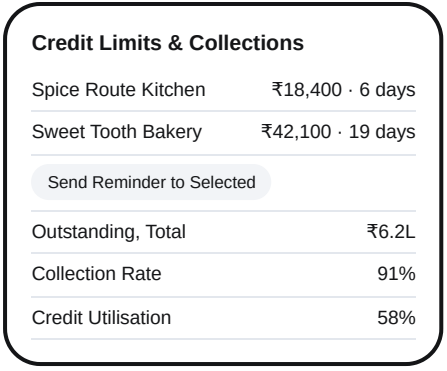

WHAT'S ON SCREEN, AND WHY

1. Balance and credit limit sit at the very top — a bulk B2B buyer's first question is always "how much room do I have left." FR-CUST-050
2. Outlets switch via a simple tab/list rather than a separate login. FR-CUST-005
3. This full balance/credit/wallet view only appears once Phase 2 is live; Phase 1's Account screen omits these fields entirely (Rule SYS-15).

ID	REQUIREMENT	PERSONA
FR-CUST-069	"Apply for Credit Line" is available from Account settings at any time after activation, independent of the original onboarding step, and starts the KYC/bank-statement/IT-returns/physical-verification flow.	End Customer
FR-CUST-064	Customer can top up the KitchenX Wallet via UPI or card; the wallet balance is visible on Cart/Checkout and Account, and is debited automatically when chosen as the payment method.	End Customer
FR-CUST-015	If Pay-later is chosen at checkout and the order exceeds available credit, the customer sees the shortfall amount and is offered to pay the difference upfront (via UPI/Card) or trim the cart to fit within the available limit.	End Customer
FR-FIN-035	A credit-line application requires KYC documents, bank statements, IT returns, and physical verification of the customer's facility — all four mandatory — before Finance Admin can approve it.	Finance Admin
FR-FIN-036	Every payment is marked "confirmed" in the Finance Admin ledger only once a direct bank-API call to KitchenX's partner bank confirms the corresponding fund credit.	Finance Admin
FR-FIN-020	Finance Admin sets a per-customer credit limit and repayment cycle, visible to the customer as "Available Credit."	Finance Admin
FR-SYS-006	Pay-later ordering is automatically suspended for an account once it passes the configured grace period unpaid, and automatically restored on payment.	System-wide rule
FR-CUST-014b	At checkout, once Phase 2 is live, the payment step adds Pay-later (where a credit limit exists and covers the order) and KitchenX Wallet (where sufficient balance exists) alongside the Phase 1 UPI/Card/COD options.	End Customer

Finance Admin — Credit Management Screens

WHAT'S ON SCREEN, AND WHY

1. Customer, outstanding amount and days-overdue sit in one sortable list, with bulk reminder dispatch. **FR-FIN-031**
2. Blocking Pay-later here is the manual equivalent of the automatic grace-period block (Rule SYS-06/FR-SYS-006) — Finance Admin can act early, before the automatic suspension triggers.
3. A monthly trend chart plots collections against monthly billing alongside these three headline tiles, so a widening outstanding-vs-collected gap is visible immediately. **FR-FIN-033**

ID	REQUIREMENT	PERSONA
FR-FIN-031	A Credit Limits/Outstanding Dues screen lists every customer with an outstanding Pay-later balance, their amount owed and days-overdue, with a bulk "Send Reminder to Selected" action; Finance Admin can manually block Pay-later for a customer here ahead of the automatic grace-period suspension (Rule SYS-06).	Finance Admin
FR-FIN-033	A Reports & Analytics view shows three headline collections tiles — Outstanding Total, Collection Rate, Credit Utilisation — alongside a monthly trend chart plotting collections against monthly billing, so a widening gap is visible immediately.	Finance Admin

WhatsApp Ordering

ID	REQUIREMENT	PERSONA
FR-CUST-084	A customer can place an order by sending a free-text message from their registered WhatsApp number only. AI parses the message — including spelling mistakes and mixed-language text — against the live catalogue to identify items and quantities; where confidence is low, the AI replies with a clarifying question rather than guessing.	End Customer

Full Behaviour-Based Buying Personalisation

ID	REQUIREMENT	PERSONA
FR-CUST-110	Customers are segmented by buying behaviour (e.g. discount-sensitive vs. not) and the menu/offer surfacing is customised per segment — a broader capability than Phase 1's category-history recommendation (FR-CUST-109, Section 27), requiring a defined segmentation model.	End Customer

Second Warehouse & Bengaluru Expansion

Phase 2's core infrastructure addition is a second warehouse (Bengaluru) and a rule for routing an order to the nearer/appropriate warehouse — functionally similar to today's single-warehouse flows. This is intentionally deferred to its own follow-up document once Phase 1 is validated, per v.03's original scoping (Section 22).

29

Phase 3 Specification — Kitchen Equipment, Servicing & Multi-City

PHASE 3

The Kitchen Appliances/Equipment product line and Equipment Servicing, kept here at full detail (not deleted), per the 19 Sept 2026 MoM. None of this ships in Phase 1 (Section 02/05/22).

Why this moved: v.03 had Kitchen Equipment/Appliances in scope for Phase 1. The 19 Sept 2026 MoM explicitly deferred both the equipment product line and equipment servicing to Phase 3. This section preserves the full v.03 specification unchanged in substance.

Kitchen Equipment Fulfilment

A meaningfully different model from the fast-grocery flow: Kitchen Appliances are not live warehouse stock, and delivery is measured in days/weeks. Lead time depends on where the specific unit is physically held.

Kitchen Appliances — Product Detail

Commercial Blender — 5L	
Available at: KitchenX Warehouse	Ships in 2 days
Sourced from: Partner Godown	ETA 12 days
360° Preview	View in AR

WHAT'S ON SCREEN, AND WHY

1. A location-aware availability banner replaces a flat lead time — the promise the customer sees always matches the unit's real physical location. FR-CUST-089
2. Ships under KitchenX branding by default; customer-specific branding can be requested, honoured where feasible. FR-CUST-086
3. Offers the same AI 360° Preview and AR Outlet Preview as Packaging. FR-CUST-087

ID	REQUIREMENT	PERSONA
FR-CUST-085	The Kitchen Appliances section shows each item with a clearly stated lead time in days/weeks rather than a delivery window; this SKU category does not use the Section 08 hours-based ETA engine.	End Customer
FR-WH-053	Kitchen Appliances inventory is provided and maintained by the backend team (catalogue availability, lead time, specs) rather than reflecting real-time warehouse stock; once an order is confirmed, the backend team sources the unit through fulfilment partners.	Warehouse Manager / Platform Admin
FR-WH-054	Every Kitchen Appliances SKU/unit carries a location attribute — "KitchenX Warehouse" or "External/Partner Godown" — kept current by the backend team and surfaced to the ETA engine and product page.	Warehouse Manager / Platform Admin
FR-CUST-089	A Kitchen Appliances product page shows a location-aware availability banner instead of a flat lead time, per FR-WH-054's location attribute.	End Customer
FR-CUST-086	Kitchen equipment ships under KitchenX branding by default; the customer may request customer-specific branding instead, honoured where feasible by the sourcing partner.	End Customer
FR-CUST-087	Kitchen equipment product pages offer the same AI 360° Preview and AR Outlet Preview described for Packaging.	End Customer

Location-Aware ETA Addendum

Kitchen Appliances sit outside the hours-based grocery ETA engine (Section 08), but their own lead-time promise is not one flat number either: it depends on where the specific unit physically sits — see FR-WH-054/FR-CUST-089 above.

Equipment Servicing

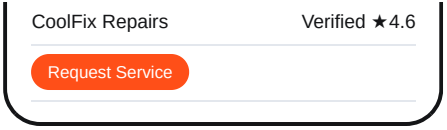

Extends the Services Listing Engine (Section 02/13/26) to bookable equipment maintenance/repair, alongside the Phase 1 Deep Cleaning category.

Services — Kitchen Equipment Servicing

Kitchen Equipment Servicing

WHAT'S ON SCREEN, AND WHY

1. Mirrors the Phase 1 Deep Cleaning booking flow (Section 07/14) exactly — same provider verification, same Request Service form, same ticket tracking.
2. Only appears in the Services nav once Phase 3 is live; Phase 1's Services screen omits it entirely (Rule SYS-17).

ID	REQUIREMENT	PERSONA
FR-PAD-033b	Platform Admin onboards and verifies Equipment Servicing providers using the same verification workflow as FR-PAD-033, extended to cover equipment repair/maintenance categories.	Platform Admin

Multi-City & Multi-Warehouse Routing

Phase 3 extends beyond Bengaluru (Phase 2) to further cities, requiring cross-city transfer logic and full multi-warehouse routing — intentionally deferred to its own follow-up document once Phase 1 and Phase 2 are validated, per Section 22.

30 Glossary

TERM	MEANING
Fleet-mode order	An order fulfilled by a KitchenX-owned vehicle on a scheduled route.
Courier-mode order	An order handed to one of the integrated third-party logistics partners.
Short pick	A case where the system shows a SKU as available but it cannot be physically located/undamaged during picking.
Pay-later / credit line	A customer's ability to place orders against a pre-approved credit limit. PHASE 2 Deferred from Phase 1 in this revision.
KitchenX Wallet	A prepaid balance a customer tops up and draws down at checkout. PHASE 2 Deferred from Phase 1 in this revision.
Cash on Delivery (COD)	New in v0.4. A Phase 1 payment method: the customer pays in cash at the point of delivery/handover; reconciled daily by Finance Admin (FR-FIN-037).
Rack/bin	A uniquely coded physical storage location within the warehouse.
Use-before date	The expiry/use-before date captured for every batch/SKU at goods receipt; feeds the daily near-expiry alert.
GST invoice	A tax invoice auto-generated per order at 5% GST, with a mandatory printed copy accompanying every Phase 1 delivery (new in v0.4) in addition to the digital copy.
Delivery Challan	The standard goods-delivery document listing every item, quantity and rate, auto-generated per order at dispatch.
Inventory Management Engine	New in v0.4. The fifth reusable platform module: shared inward (QR/manual search) and outward (online dispatch + offline sale) stock logic, one source of truth for stock level. See Section 26.
Offline / Store-Based Sale	New in v0.4. A walk-in customer purchase completed through the Warehouse App/Web rather than an off-system paper process, decrementing stock via the same Inventory Management Engine as an online order. See Section 15/26.
KitchenX Starter Kit	New in v0.4. A consulting product for aspiring restaurant/bakery/sweet-shop entrepreneurs, covering cuisine/burger/biryani/pizza kit design and a KitchenX cost audit. See Section 25.
Procurement Audit	New in v0.4. A standalone consulting service auditing and optimising an existing F&B business's current procurement process. See Section 25.
Merchant category tag	New in v0.4. The business type captured at onboarding, used to drive Recommended Categories and personalised navigation. See Section 06/27.
Frequently Bought Together	New in v0.4. A market-basket recommendation surfaced in cart, suggesting items commonly ordered alongside what's already there. See Section 07/27.
Referral programme	New in v0.4 (promoted from out-of-scope in v.03). A merchant who refers another merchant earns a ₹1,000 voucher once the referred merchant's first order is confirmed. See Section 07/25.
Pack-Proof Video/Photos	15–20 second HD video plus photos of every order, captured before/after packing, shown to the customer to reduce returns disputes.
AI 360° Preview / AR Outlet Preview	AI-rendered and augmented-reality previews of customised Packaging or (Phase 3) Kitchen Equipment products.
Talk to X	The branded AI support chatbot embedded throughout the customer app/web.
Ticket	The single backend record auto-created for any customer-reported issue, RM escalation, "Talk to X" handoff, complaint, or — new in v0.4 — Starter Kit/Procurement Audit lead.
Suggested Basket	An auto-generated, editable basket built weekly from a customer's purchase history; reconfirmed Phase 1.
Bulk Quote ticket	A ticket sub-type raised when a customer requests a bulk-order price quotation; reconfirmed Phase 1.
Promotions Engine	The admin-configurable module for merchandising discounts.
Offers Suite	The admin-configurable module for eligibility-driven propositions, including the now fully specified Referral offer.
Product Listing Engine	The generalised engine governing how any product is listed on KitchenX's catalogue.

Services Listing Engine	The parallel engine for booking services from onboarded third-party providers; Equipment Servicing moves to Phase 3.
Vendor Master	A registry of every inward supply-side vendor; reconfirmed Phase 1.
